REVISED 2012 Marking Scheme

Grade Awarded	Mark Required (/100)	% candidates achieving grade
A	73+	34.6%
B	61+	28.9%
C	50+	17.7%
D	44+	7.1%
No award	<44	11.7%

Section:	Multiple Choice	Extended Answer
Average Mark:	20.6 /40	44.0 /60

2012 Revised Higher Chemistry Marking Scheme

MC Qu	Answer	% Pupils Correct	Reasoning
1	C	90	<input checked="" type="checkbox"/> A Cl has a larger electronegativity value than Br so Cl atom carries the δ^- charge <input checked="" type="checkbox"/> B There is no polarity in Cl-Cl bond as both atoms have the same electronegativity <input checked="" type="checkbox"/> C Cl has a smaller electronegativity value than F so Cl atom carries the δ^+ charge <input checked="" type="checkbox"/> D Cl has a larger electronegativity value than I so Cl atom carries the δ^- charge
2	B	78 OldH=68	<input checked="" type="checkbox"/> A Hydrogen gas H_2 has a single covalent bond inside the H_2 molecule <input checked="" type="checkbox"/> B Helium is a monatomic gas as it is a Noble Gas <input checked="" type="checkbox"/> C Nitrogen gas N_2 has a $N \equiv N$ triple covalent bond inside the N_2 molecule <input checked="" type="checkbox"/> D Solid sulphur S_8 has covalent bonds inside the S_8 molecule
3	B	90 OldH=88	<input checked="" type="checkbox"/> A Ionic substances are compounds between metals and non-metals <input checked="" type="checkbox"/> B Compounds contain bonds between atoms \therefore monoatomic are not compounds <input checked="" type="checkbox"/> C Silicon Dioxide is an example of a compound with a covalent network structure <input checked="" type="checkbox"/> D H_2O , NH_3 and CH_4 are examples of compounds with a molecular structure
4	C	76 OldH=62	<input checked="" type="checkbox"/> A Electronegativity of carbon =2.5 \therefore electronegativity difference = 3.0-2.5 = 0.5 <input checked="" type="checkbox"/> B Electronegativity of oxygen =3.5 \therefore electronegativity difference = 3.5-3.0 = 0.5 <input checked="" type="checkbox"/> C Electronegativity of chlorine =3.0 \therefore electronegativity difference = 3.0-3.0 = 0 <input checked="" type="checkbox"/> D Electronegativity of phosphorus=2.2 \therefore electronegativity difference=3.0-2.2 =0.8
5	D	36 OldH=33	<input checked="" type="checkbox"/> A Neon atoms have no charge as they are atoms <input checked="" type="checkbox"/> B Fluoride F^- ions have an electron arrangement of 2,8 but are negatively charged <input checked="" type="checkbox"/> C Sodium atoms have no charge as they are atoms <input checked="" type="checkbox"/> D Aluminium atoms=2,8,3 \therefore Aluminium Al^{3+} ions have electron arrangement of 2,8
6	D	83 OldH=78	<input checked="" type="checkbox"/> A Melting point too high to be only London dispersion forces being overcome <input checked="" type="checkbox"/> B Conductor when solid \therefore substance contains metallic bonding <input checked="" type="checkbox"/> C Conductor when solid \therefore substance contains metallic bonding <input checked="" type="checkbox"/> D Low melting point and non-conductor as solid consistent with LD forces only
7	C	60	<input checked="" type="checkbox"/> A Propanoic acid contains polar bonds and would not dissolve non-polar coniceine <input checked="" type="checkbox"/> B Propan-1-ol contains polar bonds and would not dissolve non-polar coniceine <input checked="" type="checkbox"/> C Heptane is non-polar and would dissolve non-polar coniceine <input checked="" type="checkbox"/> D Water contains polar bonds and would not dissolve non-polar coniceine
8	C	57	<input checked="" type="checkbox"/> A Reduction is the gain of electrons (electrons on LEFT of arrow) <input checked="" type="checkbox"/> B Redox reaction do not contain electrons (they have been cancelled out) <input checked="" type="checkbox"/> C Oxidation is the loss of electrons (electrons on RIGHT of arrow) <input checked="" type="checkbox"/> D Hydration occurs when H_2O is added across a $C=C$ double bond
9	D	43 OldH=43	Write down main species involved $IO_3^- \rightarrow I_2$ Balance all atoms other than O and H $2IO_3^- \rightarrow I_2$ Add H_2O to other side to balance O atoms $2IO_3^- \rightarrow I_2 + 6H_2O$ Add H^+ to other side to balance H atoms $2IO_3^- + 12H^+ \rightarrow I_2 + 6H_2O$ Add electrons to most positive side to balance charge $2IO_3^- + 12H^+ + 10e^- \rightarrow I_2 + 6H_2O$
10	A	79	<input checked="" type="checkbox"/> A Hydration: Addition of H_2O across a $C=C$ double bond <input checked="" type="checkbox"/> B Hydrogenation: Addition of H_2 across a $C=C$ double bond <input checked="" type="checkbox"/> C Condensation: Joining of two molecules with the removal of water at the join <input checked="" type="checkbox"/> D Hydrolysis: Splitting of a large molecule into two with water added at the break
11	B	78 OldH=74	<input checked="" type="checkbox"/> A ethylethanoate hydrolyses to ethanol (gfm=46g) and ethanoic acid (gfm=60g) <input checked="" type="checkbox"/> B propylethanoate hydrolyses to propanol (gfm=60g) and ethanoic acid (gfm=60g) <input checked="" type="checkbox"/> C methylpropanoate hydrolyses to methanol (gfm=28g) and propanoic acid (gfm=74g) <input checked="" type="checkbox"/> D ethylpropanoate hydrolyses to ethanol (gfm=46g) and propanoic acid (gfm=74g)

A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.
3 mark answer	2 mark answer	1 mark answer						
Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.
