REVISED 2013 Marking Scheme

| Grade Awarded | Mark Required (/100) | % candidates achieving grade |
|---------------|----------------------|------------------------------|
| A | 72+ | 47.2% |
| B | 60+ | 22.2% |
| C | 49+ | 17.2% |
| D | 43+ | 5.5% |
| No award | <43 | 7.8% |

| Section: | Multiple Choice | Extended Answer |
|---------------|-----------------|-----------------|
| Average Mark: | 22.3 /30 | 45.8 /70 |

2013 Revised Higher Chemistry Marking Scheme

| MC Qu | Answer | % Pupils Correct | Reasoning |
|-------|--------|------------------|---|
| 1 | B | 88 OldH=74 | <input checked="" type="checkbox"/> A Electronegativity of lithium = 1.0 <input checked="" type="checkbox"/> B Electronegativity of chlorine = 3.0 ∴ greatest attraction for bonding electrons <input checked="" type="checkbox"/> C Electronegativity of sodium = 0.9 ∴ smallest attraction for bonding electrons <input checked="" type="checkbox"/> D Electronegativity of bromine = 2.8 |
| 2 | D | 76 OldH=63 | <input checked="" type="checkbox"/> A boron has a melting point of 2300°C ∴ covalent network structure <input checked="" type="checkbox"/> B carbon (diamond) sublimes at 3642°C ∴ covalent network structure <input checked="" type="checkbox"/> C silicon has a melting point of 1410°C ∴ covalent network structure <input checked="" type="checkbox"/> D sulphur has a melting point of 113°C ∴ molecular covalent structure |
| 3 | C | 71 OldH=59 | <input checked="" type="checkbox"/> A potassium atom (2,8,8,1) is larger than potassium ion (2,8,8) <input checked="" type="checkbox"/> B Chloride ion (2,8,8) is not smaller than a chlorine atom (2,8,7) <input checked="" type="checkbox"/> C Sodium atom (2,8,1) is larger than a sodium ion (2,8) <input checked="" type="checkbox"/> D Oxygen atom (2,6) is not larger than an oxide ion (2,8) |
| 4 | C | 49 OldH=50 | <input checked="" type="checkbox"/> A Metal elements contain metallic bonding <input checked="" type="checkbox"/> B All elements contain London dispersion forces between atoms <input checked="" type="checkbox"/> C Atoms in elements must have same electronegativity so bonds cannot be polar <input checked="" type="checkbox"/> D All molecular elements contain non-polar covalent bonding e.g. H ₂ , N ₂ , O ₂ , P ₄ |
| 5 | D | 76 OldH=69 | <input checked="" type="checkbox"/> A Elements can not have ionic bonds (ionic bonding only found in compounds) <input checked="" type="checkbox"/> B Covalent bonds are strong bonds <input checked="" type="checkbox"/> C Melting does not involve the removal of outer electrons (melting=physical change) <input checked="" type="checkbox"/> D Weak inter-molecular bonds are easily overcome in elements with low melting pt |
| 6 | D | 58 OldH=36 | Compounds containing -OH hydroxyl groups have hydrogen bonding between molecules ∴ hydrogen bonding brings molecules closer together. Compound D has two -OH hydroxyl groups and is more viscous due to the additional hydrogen bonding compared to the other compounds which only have one -OH group per molecule. |
| 7 | A | 84 | Oxidising agents are reduced themselves while oxidising something else. <input checked="" type="checkbox"/> A Li → Li ⁺ + e ⁻ is oxidation, lithium is top of ECS ∴ powerful reducing agent <input checked="" type="checkbox"/> B Br ₂ + 2e ⁻ → 2Br ⁻ is a reduction reaction ∴ acts as an oxidising agent <input checked="" type="checkbox"/> C F ₂ + 2e ⁻ → 2F ⁻ is a reduction reaction ∴ acts as an oxidising agent <input checked="" type="checkbox"/> D Al → Al ³⁺ + 3e ⁻ is oxidation, acts as a reducing agent but as high as Li in ECS |
| 8 | C | 85 | <input checked="" type="checkbox"/> A Butanal (C ₄ H ₈ O) is not an isomer of the structure shown (C ₄ H ₁₀ O) <input checked="" type="checkbox"/> B Butanone (C ₄ H ₈ O) is not an isomer of the structure shown (C ₄ H ₁₀ O) <input checked="" type="checkbox"/> C Butan-1-ol (C ₄ H ₉ OH) is an isomer of 2-methylpropan-2-ol (C ₄ H ₉ OH) <input checked="" type="checkbox"/> D Butanoic acid (C ₄ H ₈ O ₂) is not an isomer of the structure shown (C ₄ H ₁₀ O) |
| 9 | D | 87 OldH=82 | <input checked="" type="checkbox"/> A hexanal has a formula of C ₆ H ₁₂ O <input checked="" type="checkbox"/> B hexan-2-ol has a formula of C ₆ H ₁₄ O, usually written as C ₆ H ₁₃ OH <input checked="" type="checkbox"/> C hexan-2-one has a formula of C ₆ H ₁₂ O <input checked="" type="checkbox"/> D hexanoic acid has a formula of C ₆ H ₁₂ O ₂ , usually written as C ₅ H ₁₁ COOH |
| 10 | B | 84 OldH=73 | $\text{CH}_3\text{CH}_2\text{CH}_2\text{COOCH}_2\text{CH}_3$ <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> $\underbrace{\hspace{10em}}$ carboxylic acid side <small>(2nd name in ester)</small> 4 carbon carboxylic acid ∴ -butanoate </div> <div style="text-align: center;"> $\underbrace{\hspace{10em}}$ alcohol side <small>(1st name in ester)</small> 2 carbon alcohol ∴ ethyl- </div> </div> <p style="text-align: center;">∴ Ester name = ethyl butanoate</p> |

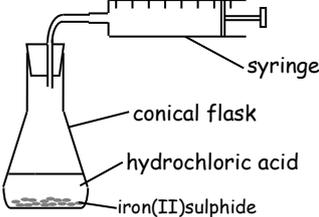

| 11 | A | 86 OldH=70 | $\begin{array}{c} \text{O} \\ \parallel \\ -\text{C}-\text{OH} \end{array} + \text{H}-\text{O}- \xrightarrow[\text{water removed at join}]{\text{condensation}} \begin{array}{c} \text{O} \\ \parallel \\ -\text{C}-\text{O}- \end{array}$ <p style="text-align: center;">carboxyl group hydroxyl group ester link</p> | | | | | | |
|------------------------|--|--|---|--------|---------------------------|-----------------------|------------------------|--|--|
| 12 | C | 91 OldH=83 | <input checked="" type="checkbox"/> A oils are liquids at room temperature <input checked="" type="checkbox"/> B oils are liquids at room temperature <input checked="" type="checkbox"/> C oils are liquids and have a higher proportion of unsaturated molecules <input checked="" type="checkbox"/> D oils are liquids at room temperature but are more unsaturated than fats | | | | | | |
| 13 | D | 65 OldH=36 | <input checked="" type="checkbox"/> A Amino Acid with R group = $-\text{CH}_3$ should be left side of dipeptide formed <input checked="" type="checkbox"/> B Amino Acids shown in dipeptide are not next to each other in tripeptide X <input checked="" type="checkbox"/> C Amino Acid with R group = $-\text{CH}(\text{CH}_3)_2$ should be right side of dipeptide formed <input checked="" type="checkbox"/> D Dipeptide shown has middle and right amino acid joined in correct order | | | | | | |
| 14 | C | 80 | <input checked="" type="checkbox"/> A Cyclohexane is a non-polar hydrocarbon and not a solvent for polar erythrose <input checked="" type="checkbox"/> B hexane is a non-polar hydrocarbon and not a solvent for polar erythrose <input checked="" type="checkbox"/> C hydrogen bonding in ethanol makes it best solvent for $-\text{OH}$ groups is erythrose <input checked="" type="checkbox"/> D trichloromethane is polar but not best solvent for erythrose as no H-bonding | | | | | | |
| 15 | A | 93 | <input checked="" type="checkbox"/> A shape is distorted during denaturing and does not revert back when cooled <input checked="" type="checkbox"/> B amide links in a protein are not broken/hydrolysed during denaturing <input checked="" type="checkbox"/> C amide links in a protein are not broken/hydrolysed during denaturing <input checked="" type="checkbox"/> D amide links in a protein are not broken/hydrolysed during denaturing | | | | | | |
| 16 | C | 76 OldH=68 | <input checked="" type="checkbox"/> A compound 2 (butan-2-ol) is a secondary alcohol and oxidises to form an ketone <input checked="" type="checkbox"/> B compound 2 (butan-2-ol) is a secondary alcohol and oxidises to form an ketone <input checked="" type="checkbox"/> C Both alcohols are primary alcohols and oxidise to aldehydes then carboxylic acids <input checked="" type="checkbox"/> D compound 3 (2-methylpropan-2-ol) is a tertiary alcohol and does not oxidises | | | | | | |
| 17 | B | 70 | <input checked="" type="checkbox"/> A 2-methylbutanal ($\text{C}_5\text{H}_{10}\text{O}$) is not an isomer of hexanal ($\text{C}_6\text{H}_{12}\text{O}$) <input checked="" type="checkbox"/> B 3-methylpentan-2-one ($\text{C}_6\text{H}_{12}\text{O}$) is an isomer of hexanal ($\text{C}_6\text{H}_{12}\text{O}$) <input checked="" type="checkbox"/> C 2,2-dimethylbutan-1-ol ($\text{C}_6\text{H}_{13}\text{OH}$) is not an isomer of hexanal ($\text{C}_6\text{H}_{12}\text{O}$) <input checked="" type="checkbox"/> D 3-ethylpentanal ($\text{C}_7\text{H}_{14}\text{O}$) is not an isomer of hexanal ($\text{C}_6\text{H}_{12}\text{O}$) | | | | | | |
| 18 | C | 61 | <input checked="" type="checkbox"/> A condensation: small molecules joining together with removal of water molecule <input checked="" type="checkbox"/> B esterification: alcohol and carboxylic acid joining together with water removed <input checked="" type="checkbox"/> C hydrolysis: splitting molecule into smaller molecule with water added at break <input checked="" type="checkbox"/> D oxidation: increase in oxygen:hydrogen ratio | | | | | | |
| 19 | B | 88 | Formula of limonene = $\text{C}_{10}\text{H}_{16}$. Isoprene units are units of 5 carbons \therefore limonene formed from 2 isoprene units | | | | | | |
| 20 | A | 58 OldH=50 | 4mol of Br^- ions in MgBr_2 \therefore 2mol of MgBr_2 formula units \therefore 2 mol of Mg^{2+} ions 3 mol of Mg^{2+} ions in total = 2 mol Mg^{2+} ions in MgBr_2 + 1 mol Mg^{2+} ions in MgSO_4 1 mol of Mg^{2+} ions in MgSO_4 \therefore 1 mol MgSO_4 formula units \therefore 1 mol SO_4^{2-} ions | | | | | | |
| 21 | A | 76 OldH=70 | $\begin{array}{ccc} 2\text{C}_2\text{H}_2(\text{g}) & + & 5\text{O}_2(\text{g}) & \longrightarrow & 4\text{CO}_2(\text{g}) & + & 2\text{H}_2\text{O}(\text{l}) \\ 2\text{mol} & & 5\text{mol} & & 4\text{mol} & & 2\text{mol} \\ 2\text{vol} & & 5\text{vol} & & 4\text{vol} & & \text{negligible volume} \\ 100\text{cm}^3 & & & & 200\text{cm}^3 & & - \end{array}$ | | | | | | |
| 22 | D | 91 OldH=82 | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 25%;">Factor</th> <th style="width: 50%;">Rate of Forward Reactions</th> <th style="width: 25%;">Rate of Back Reaction</th> </tr> </thead> <tbody> <tr> <td>Change after two hours</td> <td>Reaction already at equilibrium so remains unchanged two hours later</td> <td>Reaction already at equilibrium so remains unchanged two hours later</td> </tr> </tbody> </table> | Factor | Rate of Forward Reactions | Rate of Back Reaction | Change after two hours | Reaction already at equilibrium so remains unchanged two hours later | Reaction already at equilibrium so remains unchanged two hours later |
| Factor | Rate of Forward Reactions | Rate of Back Reaction | | | | | | | |
| Change after two hours | Reaction already at equilibrium so remains unchanged two hours later | Reaction already at equilibrium so remains unchanged two hours later | | | | | | | |
| 23 | C | 67 OldH=68 | <input checked="" type="checkbox"/> A increase in pressure would favour the forward reaction to reduce gas volume <input checked="" type="checkbox"/> B same no. of moles of gas on either side of arrow \therefore pressure has no effect <input checked="" type="checkbox"/> C increase in pressure would favour the reverse reaction to reduce gas volume <input checked="" type="checkbox"/> D same no. of moles of gas on either side of arrow \therefore pressure has no effect | | | | | | |
| 24 | B | 53 | <input checked="" type="checkbox"/> A Equilibrium lies to left \therefore percentage yield so low <input checked="" type="checkbox"/> B atom economy is high and percentage yield is low <input checked="" type="checkbox"/> C Equilibrium lies to left \therefore percentage yield so low <input checked="" type="checkbox"/> D atom economy = 100% as there is only one product | | | | | | |

| | | | |
|----|---|---------------|--|
| 25 | A | 68 OldH=69 | <input checked="" type="checkbox"/> A both factors would increase the rate of reaction <input checked="" type="checkbox"/> B an increase in activation energy would decrease the rate of reaction <input checked="" type="checkbox"/> C an increase in particle size would decrease the rate of reaction <input checked="" type="checkbox"/> D a decrease in surface area of reactants would decrease the rate of reaction |
| 26 | B | 57 OldH=43 | For a reaction to take place at room temperature: <ul style="list-style-type: none"> • reaction is likely to have a small activation energy • reaction is likely to be exothermic |
| 27 | A | 77 OldH=81 | $1\text{mol CH}_3\text{OH} = (1 \times 12) + (4 \times 1) + (1 \times 16) = 12 + 4 + 16 = 32\text{g}$ $1\text{mol CH}_3\text{OH} = -727\text{ kJ} = 32\text{g}$ $= -72.7\text{ kJ} = 32\text{g} \times \frac{-72.7}{-727}$ $= 3.2\text{g}$ |
| 28 | A | 78 OldH=83 | $\begin{array}{lll} \textcircled{1} & \text{HCOOH} + \frac{1}{2}\text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O} & \Delta H = b \\ \textcircled{2} & \text{C} + \text{O}_2 \rightarrow \text{CO}_2 & \Delta H = c \\ \textcircled{3} & \text{H}_2 + \frac{1}{2}\text{O}_2 \rightarrow \text{H}_2\text{O} & \Delta H = d \\ \textcircled{1} \times -1 & \text{CO}_2 + \text{H}_2\text{O} \rightarrow \text{HCOOH} + \frac{1}{2}\text{O}_2 & \Delta H = -b \\ \textcircled{2} & \text{C} + \text{O}_2 \rightarrow \text{CO}_2 & \Delta H = c \\ \textcircled{3} & \text{H}_2 + \frac{1}{2}\text{O}_2 \rightarrow \text{H}_2\text{O} & \Delta H = d \\ \text{Add } \textcircled{1} + \textcircled{2} + \textcircled{3} & \text{C} + \text{H}_2 + \text{O}_2 \rightarrow \text{HCOOH} & \Delta H = c + d - b = a \end{array}$ |
| 29 | B | 53 | <input checked="" type="checkbox"/> A beakers do not accurately measure volumes <input checked="" type="checkbox"/> B burette will measure volumes to an accuracy of $\pm 0.1\text{cm}^3$ <input checked="" type="checkbox"/> C pipettes will accurately the volume marked on pipette (not any other volume) <input checked="" type="checkbox"/> D measuring cylinders do not accurately measure volumes |
| 30 | D | 85 | <input checked="" type="checkbox"/> A Collection over Water: gases can be collected after bubbling through water <input checked="" type="checkbox"/> B Distillation: separation of liquids with different boiling points <input checked="" type="checkbox"/> C Evaporation: Used to separate water/solvent from solute in a solution <input checked="" type="checkbox"/> D Filtration: separation of insoluble solids from water/solutions |

2013 Revised Higher Chemistry Marking Scheme

| Long Qu | Answer | Reasoning | | | | | | | | | | | | | | | | |
|---|--|--|---|---|-------------------------------|------------------------|----------------------------|------------------------|-------------------|------------------------|--------|-----------------------|----------------|------------------|-----------------------|----------------|--|--|
| 1a(i) | $K(g) \rightarrow K^+(g) + e^-$ | 1 st Ionisation Energy: The energy required to remove one mole of electrons from one mole of atoms in the gaseous state. | | | | | | | | | | | | | | | | |
| 1a(ii) | Outer electron is further from nucleus | Potassium atoms are bigger than chlorine atoms so the outer electron is further from the nucleus of potassium than an outer electron in a chlorine atom and the nucleus of the atom has less of a hold on electrons further from the nucleus. | | | | | | | | | | | | | | | | |
| 1b | 8 | Fatty acids contain carboxyl $-COOH$ groups which react with hydroxyl $-OH$ groups to form an ester group. Sucrose contains 8 hydroxyl $-OH$ groups. | | | | | | | | | | | | | | | | |
| 2a | Terminates/reacts with free radicals | Free radical scavengers are chemicals that are able to mop up free radicals (chemicals with an unpaired electron) and will stop further free radical reactions. | | | | | | | | | | | | | | | | |
| 2b | $C_6H_8O_6$ \downarrow $C_6H_6O_6 + 2H^+ + 2e^-$ | <p>Write down the main species</p> $C_6H_8O_6 \longrightarrow C_6H_6O_6$ <p>Balance all atoms other than O and H (not needed in this example)</p> $C_6H_8O_6 \longrightarrow C_6H_6O_6$ <p>Balance O atoms by adding H_2O to other side (not needed in this example)</p> $C_6H_8O_6 \longrightarrow C_6H_6O_6$ <p>Balance H atoms by adding H^+ to other side</p> $C_6H_8O_6 \longrightarrow C_6H_6O_6 + 2H^+$ <p>Balance charge by adding e^- to the most positive side</p> $C_6H_8O_6 \longrightarrow C_6H_6O_6 + 2H^+ + 2e^-$ | | | | | | | | | | | | | | | | |
| 3a | Answer to include: | Trichloromethane is a polar molecule and there are permanent dipole to permanent dipole attractions with the polar water molecules making it soluble. Tetrachloromethane is a non-polar molecule due to the shape, of the molecule and is insoluble in polar water. | | | | | | | | | | | | | | | | |
| 3b | -115 | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Bond Breaking Steps</th> <th style="text-align: center;">Bond Forming Steps</th> </tr> </thead> <tbody> <tr> <td>4x C-H = 1x412kJ = 1648kJ</td> <td>3xC-H = 3x412 = 1236kJ</td> </tr> <tr> <td>1x Cl-Cl = 1x243kJ = 243kJ</td> <td>1xC-Cl = 1x338 = 338kJ</td> </tr> <tr> <td style="text-align: center;">Total = 1891kJ</td> <td style="text-align: center;">1xH-Cl = 1x432 = 432kJ</td> </tr> <tr> <td></td> <td style="text-align: center;">Total = 2006kJ</td> </tr> </tbody> </table> $\Delta H = \Sigma \text{Bond enthalpies for bonds broken} - \Sigma \text{Bond enthalpies for bonds formed}$ $\Delta H = 1891 - 2006$ $\Delta H = -115 \text{ kJ mol}^{-1}$ | Bond Breaking Steps | Bond Forming Steps | 4x C-H = 1x412kJ = 1648kJ | 3xC-H = 3x412 = 1236kJ | 1x Cl-Cl = 1x243kJ = 243kJ | 1xC-Cl = 1x338 = 338kJ | Total = 1891kJ | 1xH-Cl = 1x432 = 432kJ | | Total = 2006kJ | | | | | | |
| Bond Breaking Steps | Bond Forming Steps | | | | | | | | | | | | | | | | | |
| 4x C-H = 1x412kJ = 1648kJ | 3xC-H = 3x412 = 1236kJ | | | | | | | | | | | | | | | | | |
| 1x Cl-Cl = 1x243kJ = 243kJ | 1xC-Cl = 1x338 = 338kJ | | | | | | | | | | | | | | | | | |
| Total = 1891kJ | 1xH-Cl = 1x432 = 432kJ | | | | | | | | | | | | | | | | | |

| 4b(ii) | Glycerol | <p>Glycerol is also known as propane-1,2,3-triol and has the structure:</p> $ \begin{array}{ccccccc} & H & & H & & H & \\ & & & & & & \\ H & - C & - & C & - & C & - H \\ & & & & & & \\ & OH & & OH & & OH & \end{array} $ | | | | | | | | | | | | | | | | |
| 4c | 6.67 | $28\% \text{ of } 17g \text{ biscuit} = \frac{28}{100} \times 17g = 4.76g \text{ chocolate}$ $1.0g \text{ chocolate} = 1.4mg \text{ theobromine}$ $4.76g \text{ chocolate} = 1.4mg \text{ theobromine} \times \frac{4.76}{1}$ $= 6.67mg \text{ theobromine}$ | | | | | | | | | | | | | | | | |

| 4d | Open Question Answer to include: | 3 mark answer | 2 mark answer | 1 mark answer |
|---------|-------------------------------------|---|---|--|
| | | Demonstrates a <u>good understanding</u> of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem. | Demonstrates a <u>reasonable understanding</u> of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood. | Demonstrates a <u>limited understanding</u> of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood. |
| 5a | 75% | $\begin{array}{ccccccc} \text{C}_7\text{H}_6\text{O}_3 & + & \text{C}_4\text{H}_6\text{O}_3 & \longrightarrow & \text{C}_9\text{H}_8\text{O}_4 & + & \text{C}_2\text{H}_4\text{O}_2 \\ 1\text{mol} & & 1\text{mol} & & 1\text{mol} & & 1\text{mol} \\ 138\text{g} & & 102\text{g} & & 180\text{g} & & \end{array}$ $\text{atom economy} = \frac{\text{mass of desired product}}{\text{total mass of reactants}} \times 100 = \frac{180\text{g}}{240\text{g}} \times 100 = 75\%$ | | |
| 5b | 40.0% | <p>gfm salicylic acid $\text{C}_7\text{H}_6\text{O}_3 = (7 \times 12) + (6 \times 1) + (3 \times 16) = 84 + 6 + 48 = 138\text{g}$ gfm aspirin $\text{C}_9\text{H}_8\text{O}_3 = (9 \times 12) + (8 \times 1) + (4 \times 16) = 108 + 8 + 64 = 180\text{g}$</p> $\begin{array}{ccccccc} \text{C}_7\text{H}_6\text{O}_3 & + & \text{C}_4\text{H}_6\text{O}_3 & \longrightarrow & \text{C}_9\text{H}_8\text{O}_4 & + & \text{C}_2\text{H}_4\text{O}_2 \\ 1\text{mol} & & & & 1\text{mol} & & \\ 138\text{g} & & & & 180\text{g} & & \\ 5.02\text{g} & & & & 180\text{g} \times \frac{5.02}{138} & & \\ & & & & = 6.58\text{g (100\% theoretical)} & & \end{array}$ $\% \text{ yield} = \frac{\text{actual}}{\text{theoretical}} \times 100 = \frac{2.62}{6.58} \times 100 = 40.0\%$ | | |
| 6a(i) | Carboxyl | The carboxyl group is found in carboxylic acids and | | |
| 6a(ii) | Diagram showing: | | | |
| 6a(iii) | Diagram showing: | $\text{Na}^+ \text{ } ^-\text{O}-\overset{\text{O}}{\parallel}{\text{C}}-\text{CH}_2-\text{N} \begin{array}{l} \text{CH}_2-\text{CH}_3 \\ \text{CH}_2-\text{CH}_3 \end{array}$ | | |
| 6b | 25min | <p>Anaesthetic X resembles procaine on the left side \therefore 7min duration must be starting point in calculation of duration of X Anaesthetic X has N-containing ring structure: Mepivacaine has the same N-containing ring structure and has a duration 18 min longer than lidocaine which lacks the n-containing ring (and looks like procaine too) \therefore Anaesthetic X should have a duration 18 minutes longer than procaine $= 7 + 18 \text{ min} = 25 \text{ min}$</p> | | |
