REVISED 2015 Marking Scheme

Grade Awarded	Mark Required (/100)	% candidates achieving grade
A	71	30.1%
B	59	25.2%
C	47	22.5%
D	41	7.3%
No award	<41	15.0%

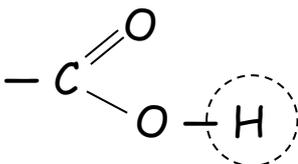

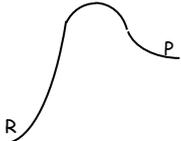

Section:	Multiple Choice	Extended Answer
Average Mark:	21.0 /40	38.9 /60

2015 Revised Higher Chemistry Marking Scheme

MC Qu	Answer	% Pupils Correct	Reasoning								
1	D	90 <small>NewH=84</small>	<input checked="" type="checkbox"/> A Neon is a noble gas with a full outer shell and does not need to form ions. <input checked="" type="checkbox"/> B Neon is a noble gas and is monatomic not diatomic. <input checked="" type="checkbox"/> C Neon is a noble gas and does not need to form bonds to get a full outer shell. <input checked="" type="checkbox"/> D Nitrogen, oxygen, fluorine and neon are all gases at room temperature.								
2	A	85 <small>OldH=80</small>	<input checked="" type="checkbox"/> A Iodine is a non-metal element with no electrical conductivity <input checked="" type="checkbox"/> B potassium is a metal with a low melting point (63°C) and high electrical conductivity <input checked="" type="checkbox"/> C silicon dioxide is a covalent network and has no electrical conductivity <input checked="" type="checkbox"/> D potassium fluoride is ionic and has no electrical conductivity as a solid								
3	C	91 <small>OldH=85 NewH=89</small>	<input checked="" type="checkbox"/> A First ionisation energy forms a 1+ ion from the element in the gaseous state <input checked="" type="checkbox"/> B First ionisation energy forms a 1+ ion from the element in the gaseous state <input checked="" type="checkbox"/> C 1 st ionisation energy: removal of one mole of electron from one mole of atoms in the gaseous state. <input checked="" type="checkbox"/> D Element must be single atoms in the gaseous state before ionisation								
4	B	86 <small>OldH=81</small>	Group 3 elements have a low 3 rd ionisation energy and a very high 4 th ionisation energy <ul style="list-style-type: none"> • removal of the 3rd electron creates a full outer shell • removal of the 4th electron breaks into a full outer shell 								
5	A	78 <small>OldH=74 NewH=62</small>	<input checked="" type="checkbox"/> A X-Y: activation energy (E _a) for the forward reaction <input checked="" type="checkbox"/> B Y-X: would give a negative value but activation energy (E _a) must be endothermic <input checked="" type="checkbox"/> C Y-Z: would be the enthalpy change (ΔH) for the reverse reaction <input checked="" type="checkbox"/> D Z-Y: would be the enthalpy change (ΔH) for the forward reaction								
6	C	46 <small>NewH=38</small>	<input checked="" type="checkbox"/> A OH ⁻ would react with both Br ₂ or I ₂ as OH ⁻ is above both on ECS <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; border: none;"> $\text{O}_2 + 2\text{H}_2\text{O} + 4\text{e}^- \longrightarrow 4\text{OH}^-$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>upper reaction reverses</i></p> $4\text{OH}^- \longrightarrow \text{O}_2 + 2\text{H}_2\text{O} + 4\text{e}^-$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>add together and cancel electrons</i></p> $\text{Br}_2 + 4\text{OH}^- \longrightarrow 2\text{Br}^- + \text{O}_2 + 2\text{H}_2\text{O}$ </td> <td style="width: 50%; border: none;"> $\text{O}_2 + 2\text{H}_2\text{O} + 4\text{e}^- \longrightarrow 4\text{OH}^-$ $\text{I}_2 + 2\text{e}^- \longrightarrow 2\text{I}^-$ <p style="text-align: center;"><i>upper reaction reverses</i></p> $4\text{OH}^- \longrightarrow \text{O}_2 + 2\text{H}_2\text{O} + 4\text{e}^-$ $\text{I}_2 + 2\text{e}^- \longrightarrow 2\text{I}^-$ <p style="text-align: center;"><i>add together and cancel electrons</i></p> $\text{I}_2 + 4\text{OH}^- \longrightarrow 2\text{I}^- + \text{O}_2 + 2\text{H}_2\text{O}$ </td> </tr> </table> <input checked="" type="checkbox"/> B SO ₃ ²⁻ would react with both Br ₂ or I ₂ as SO ₃ ²⁻ is above both on ECS <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; border: none;"> $\text{SO}_4^{2-} + 2\text{H}^+ + 2\text{e}^- \longrightarrow \text{SO}_3^{2-} + \text{H}_2\text{O}$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>upper reaction reverses</i></p> $\text{SO}_3^{2-} + \text{H}_2\text{O} \longrightarrow \text{SO}_4^{2-} + 2\text{H}^+ + 2\text{e}^-$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>add together and cancel electrons</i></p> $\text{Br}_2 + \text{SO}_3^{2-} + \text{H}_2\text{O} \longrightarrow 2\text{Br}^- + \text{SO}_4^{2-} + 2\text{H}^+$ </td> <td style="width: 50%; border: none;"> $\text{SO}_4^{2-} + 2\text{H}^+ + 2\text{e}^- \longrightarrow \text{SO}_3^{2-} + \text{H}_2\text{O}$ $\text{I}_2 + 2\text{e}^- \longrightarrow 2\text{I}^-$ <p style="text-align: center;"><i>upper reaction reverses</i></p> $\text{SO}_3^{2-} + \text{H}_2\text{O} \longrightarrow \text{SO}_4^{2-} + 2\text{H}^+ + 2\text{e}^-$ $\text{I}_2 + 2\text{e}^- \longrightarrow 2\text{I}^-$ <p style="text-align: center;"><i>add together and cancel electrons</i></p> $\text{I}_2 + \text{SO}_3^{2-} + \text{H}_2\text{O} \longrightarrow 2\text{I}^- + \text{SO}_4^{2-} + 2\text{H}^+$ </td> </tr> </table> <input checked="" type="checkbox"/> C Fe ²⁺ is above Br ₂ so would react with Br ₂ but Fe ²⁺ is below I ₂ so no reaction <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; border: none;"> $\text{Fe}^{3+} + \text{e}^- \longrightarrow \text{Fe}^{2+}$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>upper reaction reverses</i></p> $\text{Fe}^{2+} \longrightarrow \text{Fe}^{3+} + \text{e}^-$ $\text{Br}_2 + 2\text{e}^- \longrightarrow 2\text{Br}^-$ <p style="text-align: center;"><i>Multiple to equalise electrons, add together & cancel electrons</i></p> $\text{Br}_2 + 2\text{Fe}^{2+} \longrightarrow 2\text{Br}^- + 2\text{Fe}^{3+}$ </td> <td style="width: 50%; 30	D	46	<input checked="" type="checkbox"/> A Swirling the flask mixes the chemical thoroughly and the end-point is accurate <input checked="" type="checkbox"/> B Using a white tile ensures that the colour changes is accurately determined <input checked="" type="checkbox"/> C Adding solution dropwise at the end ensures the end-point is accurate to one drop <input checked="" type="checkbox"/> D Repeating a titration improves the reliability of a reaction not the accuracy															

3a	forms hydrogen bonds with water	Hydrogen bonding is formed when N—H, O—H or H—F bonds interact with water molecules. These bonds are highly polar allowing the compounds containing these bonds to be soluble in a polar solvent like water.
3b(i)	Any one carboxyl group circled similar to:	
3b(ii)	H ⁺ ions are not produced until dissolved in water	Acidity and alkalinity are water-based systems and no pH can be measured if water is absent. When water is added to solid citric acid, H ⁺ ions will dissociate from carboxyl group and can then react with hydrogencarbonate ions.
3c(i)		Endothermic reactions take energy from the surroundings and lower the temperature in those surroundings. On a potential energy diagram the products are higher than the reactants. Exothermic reactions give heat to the surroundings and raise the temperature of the surroundings. On a potential energy diagram the products are lower than the reactants.
3c(ii)	Answer to Include:	1 st Mark: Volume/mass of water 2 nd Mark: Change in temperature or initial and final temperature
3d	4.29 litres	$\text{gfm NaHCO}_3 = 84\text{g} \quad \text{no. of mol} = \frac{\text{mass}}{\text{gfm}} = \frac{15\text{g}}{84\text{g}} = 0.179\text{mol}$ $\text{C}_6\text{H}_8\text{O}_7 + 3\text{NaHCO}_3 \longrightarrow \text{C}_6\text{H}_5\text{O}_7\text{Na}_3 + 3\text{H}_2\text{O} + 3\text{CO}_2$ $\begin{array}{ccccccc} & & 3\text{mol} & & & & 3\text{mol} \\ & & 1\text{mol} & & & & 1\text{mol} \\ & & 0.179\text{mol} & & & & 0.179\text{mol} \end{array}$ $\text{gfm CO}_2 = (1 \times 12) + (2 \times 16) = 12 + 32 = 44\text{g}$ $\text{Volume} = \text{no. of mol} \times \text{Molar Volume} = 0.179\text{mol} \times 24 \text{ litres mol}^{-1} = 4.29 \text{ litres}$
4a	Citronellol or geraniol or anisyl alcohol	Only peaks B (citronellol), C (geraniol) and E (anisyl alcohol) appear on all three chromatograms
4b	Counterfeit perfumes have lower concentrations of compounds	The area under each peak is proportional to the quantity of that chemical in the sample. The smaller the peak, the lower the concentration of that chemical.
4c(i)	Inert/does not react with molecules	Gas chromatography needs a carrier gas to flow through the separating column. The sample compounds pass through the column at different rates dependent on their attraction to the mobile phase (the helium gas) or the stationary phase (the contents of the column)
4c(ii)	Size of molecules or temperature of column	The smaller molecules will pass through the column more quickly than larger molecules. Increasing the temperature in the column would increase the kinetic energy of the particles and they would pass through the column more quickly.
4d(i)	Terpenes	Terpenes are formed when multiple units of isoprene join together.
4d(ii)	3,7-dimethylocta-1,6-dien-3-ol	$\text{3,7-dimethylocta-1,6-dien-3-ol}$ $\begin{array}{ccc} \text{—CH}_3 \text{ groups on} & & \text{8 carbons with} \\ \text{carbon C}_3 \text{ and C}_7 & & \text{2x C=C on C}_1 \text{ and C}_6 & & \text{—OH group} \\ & & & & \text{on C}_3 \end{array}$

5	Open Question Answer to Include:	3 mark answer		2 mark answer		1 mark answer	
		Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.		Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.		Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.	
6a	Answer to include:	1 st Mark:	Sodium lauryl sulphate has both a hydrophobic/oil-soluble part and a hydrophilic/water-soluble part				
		2 nd Mark:	Correct identification of ionic head as hydrophilic/water-soluble part of molecule and hydrocarbon tail as hydrophobic/oil-soluble part of molecule.				
		3 rd Mark:	Description of how this results in globule/ball-like structure with oil/grease held inside globule or mention of emulsion				
6b(i)	24.8	<p>A line of best fit should be drawn on the graph which ignores the obvious rogue result. When viscosity = 1.5 then the %NaCl (by mass) on the best fit straight line = 2.25%</p> $1\text{cm}^3 \text{ handwash contains } 1.1\text{g}$ $1\text{litre handwash} = 1000\text{cm}^3 \text{ handwash} \quad 1.1\text{g} \times 1000/1$ $= 1100\text{g}$ $100\% \text{ mass of handwash} = 1100\text{g}$ $2.25\% \text{ mass} = 1100\text{g} \times 2.25/100$ $= 24.75\text{g sodium chloride}$					
6b(ii)	Mass of sodium chloride becomes too high the viscosity will decrease	The viscosity peaks at 3.9 units at around 3.15% NaCl (by mass). If the NaCl increases beyond this point then the viscosity starts to decrease and NaCl is being wasted.					
6c	green	E133 absorbs wavelengths corresponding to Violet, Indigo and Blue. E102 absorbs wavelengths corresponding to Red, Orange and Yellow. ∴ only the wavelengths corresponding to green are transmitted.					
7a	$\begin{array}{c} \text{--- C --- H} \\ \\ \text{O} \end{array}$	Aldehyde groups contain a carbonyl (C=O) group with a hydrogen atom attached. The carbon in the aldehyde group is always carbon number one in any numbering system assigned to an aldehyde when naming the compound.					
7b		Problem Solving Question					
7c	Condensation	Condensation Polymerisation: small molecules (e.g. glucose) joining up to make a larger molecule (e.g. starch) with a small molecule (e.g. water) removed at the joins.					
7d	Answer to include:	Amylopectin molecules are unable to pack closely together due to shape and can separate more easily. (It has more readily accessible -OH groups.) Amylose molecules pack closer together and more difficult to separate.					
8	Open Question Answer to Include:	3 mark answer		2 mark answer		1 mark answer	
		Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.		Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.		Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.	

9a(i)	Flow chart complete with:	<p>1st Mark: calcium carbonate</p> <p>ammonia</p> <p>carbon dioxide</p> <p>calcium oxide</p> <p>2nd Mark: sodium hydrogencarbonate</p> <p>ammonium chloride</p> <p>water</p> <p>sodium carbonate</p>					
9a(ii)	Calcium chloride/byproducts can be sold	The calcium chloride can be sold for profit even though it is not the main product of the Solvay Process. If the calcium chloride is not sold for profit then it would have to be responsibly disposed of at a cost.					
9b	Adding Na ⁺ shifts equilibrium to right	Brine contains Na ⁺ ions. Na ⁺ ions are a reactant in the reaction. When a reactant is added to a reaction at equilibrium, the equilibrium shifts to the right to make additional products and remove the additional Na ⁺ ions.					
9c	20 kJ mol ⁻¹	$\text{CaCO}_3 + 2\text{NaCl} \rightarrow \text{Na}_2\text{CO}_3 + \text{CaCl}_2$ <p>① $\text{CaCO}_3 \rightarrow \text{CO}_2 + \text{CaO} \quad \Delta H = +178\text{kJ}$</p> <p>② $\text{CaO} + \text{H}_2\text{O} \rightarrow \text{Ca(OH)}_2 \quad \Delta H = -65\text{kJ}$</p> <p>③ $\text{NaCl} + \text{NH}_3 + \text{CO}_2 + \text{H}_2\text{O} \rightarrow \text{NaHCO}_3 + \text{NH}_4\text{Cl} \quad \Delta H = -79\text{kJ}$</p> <p>④ $2\text{NaHCO}_3 \rightarrow \text{Na}_2\text{CO}_3 + \text{H}_2\text{O} + \text{CO}_2 \quad \Delta H = +85\text{kJ}$</p> <p>⑤ $\text{Ca(OH)}_2 + 2\text{NH}_4\text{Cl} \rightarrow \text{CaCl}_2 + 2\text{H}_2\text{O} + 2\text{NH}_3 \quad \Delta H = -20\text{kJ}$</p> <p>① $\text{CaCO}_3 \rightarrow \text{CO}_2 + \text{CaO} \quad \Delta H = +178\text{kJ}$</p> <p>② $\text{CaO} + \text{H}_2\text{O} \rightarrow \text{Ca(OH)}_2 \quad \Delta H = -65\text{kJ}$</p> <p>③ $\times 2 \text{NaCl} + 2\text{NH}_3 + 2\text{CO}_2 + 2\text{H}_2\text{O} \rightarrow 2\text{NaHCO}_3 + 2\text{NH}_4\text{Cl} \quad \Delta H = -158\text{kJ}$</p> <p>④ $2\text{NaHCO}_3 \rightarrow \text{Na}_2\text{CO}_3 + \text{H}_2\text{O} + \text{CO}_2 \quad \Delta H = +85\text{kJ}$</p> <p>⑤ $\text{Ca(OH)}_2 + 2\text{NH}_4\text{Cl} \rightarrow \text{CaCl}_2 + 2\text{H}_2\text{O} + 2\text{NH}_3 \quad \Delta H = -20\text{kJ}$</p> <p>add $\text{CaCO}_3 + 2\text{NaCl} \rightarrow \text{Na}_2\text{CO}_3 + \text{CaCl}_2 \quad \Delta H = +20\text{kJ}$</p>					
10a	Kill bacteria/fungi	Hypochlorite is added to swimming pool water to kill bacteria and fungi in the water. It also inactivates viruses. It is also added to drinking water but at much lower concentrations.					
10b(i)	Answer to include:	<p>1st mark: rinse the burette with (thiosulphate) solution.</p> <p>2nd and 3rd marks for two of the following points:</p> <table border="1" data-bbox="555 1301 1497 1377"> <tbody> <tr> <td>Fill burette above the scale with thiosulphate solution</td> <td>Filter funnel to be removed</td> <td>Tap opened/some solution drained to ensure no air bubbles</td> <td>(thiosulphate) solution run into scale reading</td> <td>Reading should be made from bottom of the meniscus</td> </tr> </tbody> </table>	Fill burette above the scale with thiosulphate solution	Filter funnel to be removed	Tap opened/some solution drained to ensure no air bubbles	(thiosulphate) solution run into scale reading	Reading should be made from bottom of the meniscus
