The information in this publication may be reproduced to support SQA qualifications only on a non-commercial basis. If it is to be used for any other purposes written permission must be obtained from the Assessment Materials Team, Dalkeith.

Where the publication includes materials from sources other than SQA (secondary copyright), this material should only be reproduced for the purposes of examination or assessment. If it needs to be reproduced for any other purpose it is the centre's responsibility to obtain the necessary copyright clearance. SQA's Assessment Materials Team at Dalkeith may be able to direct you to the secondary sources.

These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments. This publication must not be reproduced for commercial or trade purposes.

Higher Chemistry

General information for markers

The general comments given below should be considered during all marking.

- 1 Marks should **not** be deducted for incorrect spelling or loose language as long as the meaning of the word(s) is conveyed.

Example: Answers like 'distiling' (for 'distillation') and 'it gets hotter' (for 'the temperature rises') should be accepted.

- 2 A right answer followed by a wrong answer should be treated as a cancelling error and no marks should be given.

Example: What is the colour of universal indicator in acid solution?

The answer 'red, blue' gains no marks.

- 3 If a right answer is followed by additional information which does not conflict, the additional information should be ignored, whether correct or not.

Example: Why can the tube not be made of copper?

If the correct answer is related to a low melting point, 'It has a low melting point and is coloured grey' would **not** be treated as having a cancelling error.

- 4 Full marks are usually awarded for the correct answer to a calculation on its own; the part marks shown in the Marking Instructions are for use when working is given. An exception is when candidates are asked to 'Find, by calculation,'.

- 5 A half mark should be deducted in a calculation for each arithmetic slip.

- 6 A half mark should be deducted for incorrect or missing units **only when stated in the Marking Instructions**. No marks should be deducted for incorrect or missing units at intermediate stages in a calculation.

- 7 Where a wrong numerical answer (already penalised) is carried forward to another step, no further penalty is incurred provided the result is used correctly.

- 8 Ignore the omission of one H atom from a full structural formula provided the bond is shown.

- 9 With structures involving an – OH or an – NH₂ group, a half mark should be deducted if the 'O' or 'N' are not bonded to a carbon, ie OH–CH₂ and NH₂–CH₂.

- 10 When drawing structural formulae, a half mark should be deducted if the bond points to the 'wrong' atom, eg

- 11 A symbol or correct formula should be accepted in place of a name **unless stated otherwise in the Marking Instructions**.

- 12 When formulae of ionic compounds are given as answers it will only be necessary to show ion charges if these have been specifically asked for. However, if ion charges are shown, they must be correct. If incorrect charges are shown, no marks should be awarded.

- 13 If an answer comes directly from the text of the question, no marks should be given.

Example: A student found that 0.05 mol of propane, C₃H₈ burned to give 82.4 kJ of energy.

Name the kind of enthalpy change which the student measured.

No marks should be given for 'burning' since the word 'burned' appears in the text.

- 14 A guiding principle in marking is to give credit for (partially) correct chemistry rather than to look for reasons not to give marks.

Example 1: The structure of a hydrocarbon found in petrol is shown below.

Name the hydrocarbon.

Although the punctuation is not correct, '3, methyl-hexane' should gain the full mark.

Example 2: A student measured the pH of four carboxylic acids to find out how their strength is related to the number of chlorine atoms in the molecule. The results are shown.

Structural formula	pH
CH ₃ COOH	1.65
CH ₂ ClCOOH	1.27
CHCl ₂ COOH	0.90
CCl ₃ COOH	0.51

How is the strength of the acids related to the number of chlorine atoms in the molecule?

Although not completely correct, an answer such as 'the more Cl₂, the stronger the acid' should gain the full mark.

- 15 Unless the question is clearly about a non-chemistry issue, eg costs in industrial chemistry, a non-chemical answer gains no marks.

Example: Why does the (catalytic) converter have a honeycomb structure?

A response such as 'to make it work' may be correct but it is not a chemical answer and the mark should not be given.

- 16 When it is very difficult to make a decision about a partially correct answer, a half mark can be awarded.

- 17 When marks have been totalled, a half mark should be rounded up.

Marking Scheme

Section A

1	A	11	A	21	D	31	B
2	C	12	B	22	B	32	C
3	D	13	A	23	C	33	D
4	B	14	A	24	D	34	D
5	A	15	C	25	A	35	C
6	B	16	B	26	D	36	B
7	D	17	B	27	B	37	A
8	B	18	A	28	A	38	C
9	D	19	B	29	C	39	C
10	C	20	D	30	C	40	B

Mark Scheme	Worth $\frac{1}{2}$	Worth 0
<p>1 A – covalent molecular solid $\frac{1}{2}$ D – covalent network solid $\frac{1}{2}$ C – ionic $\frac{1}{2}$ B – metallic $\frac{1}{2}$</p> <p style="text-align: right;">2</p>		
<p>2 (a) number of protons increases or increased atomic number or greater nuclear charge (pull) or greater pull on outer electrons or increased nuclear field strength</p> <p style="text-align: right;">1</p>		<p>increased number of electrons or larger nucleus or stronger nucleus</p>
<p>(b) a fullerene or Buckminster fullerene or C₆₀, C₇₀ etc</p> <p style="text-align: right;">1</p>		
<p>(c) no difference in (electronegativity) values or same (electronegativity) values or both have a value of 3 or same attraction for electrons</p> <p style="text-align: right;">1</p>	<p>difference in electronegativity is less than 0.5</p>	<p>similar (small difference) in electronegativity values</p>

Mark Scheme	Worth $\frac{1}{2}$	Worth 0
<p>3 (a) carbon dioxide ($\frac{1}{2}$) and nitrogen ($\frac{1}{2}$) (accept correct formulae)</p> <p style="text-align: right;">1</p>		<p>carbon oxide or N in place of N_2</p>
<p>(b) molecules absorbed on the surface (active sites) of the catalyst (metal) $\frac{1}{2}$ (covalent) bonds weaken or more successful collisions $\frac{1}{2}$ reaction occurs or mention of product $\frac{1}{2}$ molecules desorb or leave the surface $\frac{1}{2}$</p> <p>(accept above points on suitable diagram)</p> <p style="text-align: right;">2</p>		<p>lower activation energy</p>

Mark Scheme	Worth ½	Worth 0
<p>4 (a) $E = mc\Delta T$</p> $= 0.10 \times 4.18 \times 10 \quad \frac{1}{2}$ $= 4.18 \text{ kJ} \quad \frac{1}{2}$ <p>(unit and sign not required at this stage)</p> <p>mass of 1 mol $\text{CH}_3\text{OH} = 32 \text{ g} \quad \frac{1}{2}$</p> <p>$0.45 \text{ g CH}_3\text{OH} \leftrightarrow 4.18 \text{ kJ} \quad \frac{1}{2}$</p> $32 \text{ g} \quad \leftrightarrow \quad \frac{32 \times (-4.18)}{0.45} \text{ kJ mol}^{-1}$ $= -297 \text{ kJ mol}^{-1} \quad \frac{1}{2}$ <p>or</p> $n = \frac{0.45}{32} \quad \frac{1}{2} \text{ for } 32$ $= 0.014 \text{ mol} \quad \frac{1}{2}$ $\Delta H = -\frac{4.18}{0.014} \quad 1 \text{ for } 4.18$ $= -298.6 \text{ kJ mol}^{-1} \quad \frac{1}{2}$ <p>(correct sign given in answer ½; units not required; deduct ½ for incorrect units, eg kJ mol l^{-1}, accept kJ)</p> <p style="text-align: right;">2</p>		

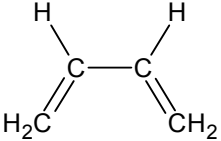

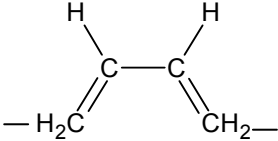

Mark Scheme	Worth ½	Worth 0
<p>(b) incomplete combustion of methanol or heat loss (to surroundings, etc) or some loss of methanol due to evaporation</p> <p>(any two – 1 mark each) 2</p>		<p>experiment not repeated or human error or impure methanol or water evaporating</p>
<p>5 (a) (i)</p> $ \begin{array}{c} \text{H} \\ \\ \text{H} - \text{C} - \text{O} - \text{H} \\ \\ \text{H} - \text{C} - \text{O} - \text{H} \\ \\ \text{H} - \text{C} - \text{O} - \text{H} \\ \\ \text{H} \end{array} $ <p>or shortened formula 1</p> <p>(ii) fats or oils or glycerides or triglycerides 1</p>		
<p>(b) $4\text{C}_3\text{H}_5\text{N}_3\text{O}_9(\text{l}) \rightarrow 6\text{N}_2(\text{g}) + 10\text{H}_2\text{O}(\text{g}) + 12\text{CO}_2(\text{g}) + \text{O}_2(\text{g})$ or $2\text{C}_3\text{H}_5\text{N}_3\text{O}_9(\text{l}) \rightarrow 3\text{N}_2(\text{g}) + 5\text{H}_2\text{O}(\text{g}) + 6\text{CO}_2(\text{g}) + \frac{1}{2}\text{O}_2(\text{g})$ or $\text{C}_3\text{H}_5\text{N}_3\text{O}_9(\text{l}) \rightarrow 1\frac{1}{2}\text{N}_2(\text{g}) + 2\frac{1}{2}\text{H}_2\text{O}(\text{g}) + 3\text{CO}_2(\text{g}) + \frac{1}{4}\text{O}_2(\text{g})$ 1</p>		

Mark Scheme	Worth ½	Worth 0
<p>6 (a) First mark for valid method of measuring rate, eg count how many bubbles (½) in certain time interval (½) or time how long it takes (½) to form a set number of bubbles (½)</p> <p>Second mark for valid method of altering temperature, eg repeat experiment with test-tube in water bath or heat solution to different temperatures or repeat experiment at different temperatures or repeat using a water bath</p> <p style="text-align: right;">2</p>	<p>time how long it takes for reaction or count the bubbles</p> <p>use a water bath or heat the test tube</p>	<p>heat water to different temperatures</p>
<p>(b) enzyme (protein, catalyst) denatures or changes shape or active sites altered</p> <p style="text-align: right;">1</p>		<p>enzyme dies or doesn't work or destroyed or damaged</p>

Mark Scheme		Worth ½	Worth 0
7	<p>(a) ethene is produced (made, formed) from other chemicals or ethene requires prior processing or ethene does not occur naturally or made from crude oil</p> <p style="text-align: right;">1</p>		ethene is a feedstock or not easily obtained
	<p>(b) (i) any response that implies recycling the ethene, eg reused, recirculated</p> <p style="text-align: right;">1</p> <p>(ii) distillation</p> <p style="text-align: right;">1</p>		evaporation or fractionating
	<p>(c) (i) hydration or addition</p> <p style="text-align: right;">1</p> <p>(ii) equilibrium moves to the left or shifts (moves) to give less ethanol (product) in mixture or shifts (moves) to give more reactants in mixture or moves in (favours) endothermic direction or speeds up right to left reaction</p> <p style="text-align: right;">1</p>	reversible	equilibrium or oxidation

Mark Scheme	Worth $\frac{1}{2}$	Worth 0
<p>(iii) 1 mol C₂H₄ ↔ 1 mol C₂H₅OH</p> <p>28 g ↔ 46 g $\frac{1}{2}$</p> <p>10.0 kg ↔ $\frac{10.0 \times 46 \text{ kg}}{28} \frac{1}{2} = 16.4 \text{ kg} \frac{1}{2}$</p> <p>% yield = $\frac{1.64 \times 100}{16.4} = 10\% \frac{1}{2}$</p> <p>or</p> <p>n = $\frac{10000}{28} \frac{1}{2}$</p> <p>= 357 mol $\frac{1}{2}$</p> <p>mass = 357 × 46</p> <p>= 16.4 kg $\frac{1}{2}$</p> <p>% yield = $\frac{1.64 \times 100}{16.4} = 10\% \frac{1}{2}$</p> <p style="text-align: right;">2</p>		

Mark Scheme	Worth ½	Worth 0
<p>8 (a) to ensure the same volume of gas is used each time or to give a fair test or to ensure sufficient breath has passed through or similar</p> <p style="text-align: right;">1</p>		
<p>(b) H⁺(aq) ions are needed for the reaction or to provide H⁺(aq) ions or to remove O (as water) or to allow the reduction to take place or so the alcohol can be oxidised or to allow chromate to act as oxidising agent</p> <p style="text-align: right;">1</p>	<p>allow oxidation or allow redox reaction</p>	<p>so the reaction works or to lower the pH or to react with hydroxide ions or to speed up the reaction or to act as a catalyst</p>
<p>(c) ethanal (acetaldehyde) or ethanoic acid (acetic acid) (accept correct structure)</p> <p style="text-align: right;">1</p>	<p>vinegar or alkanal (aldehyde) or alkanoic (carboxylic) acid</p>	

Mark Scheme	Worth ½	Worth 0
<p>9 (a) (i)</p>  <p>or full structural formula</p> <p>(ii) addition(al)</p>	<p>1</p> <p>1</p>	
<p>(b) hard-wearing or more like a thermoset or stronger or more rigid or harder or less elastic or melts less easily or durable or longer lasting, etc</p>	<p>1</p>	

Mark Scheme	Worth $\frac{1}{2}$	Worth 0
<p>10 (a) $\text{NO}_3^-(\text{aq}) + 4\text{H}^+(\text{aq}) + 3\text{e}^- \rightarrow \text{NO}(\text{g}) + 2\text{H}_2\text{O}(\ell)$ (state symbols not required)</p>	1	
<p>(b) 1 mol Cu \leftrightarrow 1 mol SO₂ $\frac{1}{2}$ 63.5 g \leftrightarrow 24 litre $\frac{1}{2}$ 10.0 g \leftrightarrow $\frac{10.0 \times 24}{63.5} \frac{1}{2} = 3.8$ litre $\frac{1}{2}$ or n = $\frac{10}{63.5} \frac{1}{2}$ = 0.16 mol $\frac{1}{2}$ volume = 0.16 \times 24 $\frac{1}{2}$ = 3.8 litre $\frac{1}{2}$ (no units required; deduct $\frac{1}{2}$ for incorrect units; accept correct answer in cm³)</p>	2	

Mark Scheme		Worth $\frac{1}{2}$	Worth 0
11	(a) 2	1	
	(b) ethanoic acid: higher sulphuric acid: lower	1 1	
	(c) hydrogen bonding 1 due to polar O—H bond or as a result of relatively high electronegativity difference between oxygen and hydrogen of O—H bond $\frac{1}{2}$ mention of attraction between the H of the O—H bond and the O of the C = O $\frac{1}{2}$ ($\delta+$ and $\delta-$ indication would cover the two latter $\frac{1}{2}$ marks)	2	permanent dipole/dipole ethanoic acid is polar

Mark Scheme	Worth ½	Worth 0
<p>12 (a) (i) 2 temp. of KOH (aq)</p> <p>3 temp. of HCl (aq)</p> <p>4 vol. of HCl (aq) or vol. of KCl (aq)</p> <p>5 final (max) temp. of KCl (aq) 2</p> <p>(accept average initial temperature and temperature change for 1 mark)</p> <p>(ii) 1 reversed 1852 kJ mol⁻¹ ½</p> <p>2 unchanged -437 kJ mol⁻¹ ½</p> <p>3 multiplied by 3 -1806 kJ mol⁻¹ ½</p> <p>correct addition -391 kJ mol⁻¹ ½</p> <p>(3 'sensible' numbers with 2 correct required for ½ mark for addition based on following through; no units required; deduct ½ for incorrect units; accept kJ) 2</p>		
<p>(b) 2Na(s) + ½ O₂(g) → Na₂O(s)</p> <p>(state symbols required) 1</p>		4Na(s) + O ₂ (g) → 2Na ₂ O(s)

Mark Scheme		Worth ½	Worth 0
13 (a)	reaction vessel containing NaOH and CH ₃ COONa being heated	1	reaction vessel without heat use of test tube without graduations
	collection by displacement of water using an upturned measuring cylinder (graduated test tube) or collection using gas syringe	1	
(b)	ethane or correct formula	1	

Mark Scheme		Worth ½	Worth 0
14	<p>(a) (i) ${}_{95}^{241}\text{Am} \rightarrow {}_{93}^{237}\text{Np} + \alpha$ 1</p> <p>(accept ${}_{2}^{4}\text{He}$ or ${}_{2}^{4}\text{He}^{2+}$ in place of α; accept α above arrow)</p> <p>(ii) alpha-particles not very penetrating or absorbed by plastic/paper/air or mass of radioisotope very low or americium oxide insoluble so not absorbed if ingested 1</p>	correct equation with mass numbers and atomic numbers to right of symbols	radiation weak or deflected by paper or not strong enough
	<p>(b) formula mass $\text{AmO}_2 = 273$ ½</p> <p>mass americium-241 = $\frac{241 \times 0.00025}{273} = 0.00022 \text{ g}$ ½</p> <p>(no units required; deduct ½ for incorrect units)</p>		

Mark Scheme	Worth ½	Worth 0
<p>15 (a) $2\text{Cl}^-(\text{aq}) + 2\text{H}_2\text{O}(\ell) \rightarrow \text{Cl}_2(\text{g}) + \text{H}_2(\text{g}) + 2\text{OH}^-(\text{aq})$ 1</p> <p>(ignore state symbols; both charges required)</p>	electrons in equation	
<p>(b) (i) sodium hydroxide 1</p> <p>(ii) use as a fuel or not finite (renewable) or does not produce CO_2, etc 1</p>	Na^+ sol. or OH^- sol	sodium
<p>(c) $Q = I \times t = 80\,000 \times 10 \times 60 \times 60$ ½</p> <p>$= 288 \times 10^7 \text{ C}$ ½</p> <p>$1 \text{ mol Cl}_2 \leftrightarrow 2 \times 96\,500 \text{ C}$ ½</p> <p>$288 \times 10^7 \text{ C} \rightarrow \frac{288 \times 10^7}{2 \times 96\,500} = 1.49 \times 10^4 \text{ moles}$ ½</p> <p>mass of $\text{Cl}_2 = 1.49 \times 10^4 \times 71 \times 10^{-3}$ ½ = 1059 kg ½</p> <p>(no units required; deduct ½ for incorrect units; accept correct answer in g)</p> <p style="text-align: right;">3</p>		

Mark Scheme		Worth ½	Worth 0
16	(a) C—O	1	
	(b) (i) S ½ Q ½ or C≡C—H ½ C≡C ½	1	
	(ii) propan-1-ol	1	propanol or propane-1-ol or prop-1-ol correct structure

[END OF MARKING INSTRUCTIONS]
