2013 Standard Grade Chemistry Credit Marking Scheme

Question	Answer	Chemistry Covered						
		Answer	A	B	C	D	E	F
1a	B	Element	Hydrogen	Copper <small>(1083°C in old data booklet)</small>	Oxygen	Iron	Magnesium	Iodine
		Melting Pt	-259°C	1085°C	-219°C	1538°C	650°C	114°C
1b	D	Iron metal is made when iron oxide is reduced by carbon monoxide in a blast furnace: $\text{Fe}_2\text{O}_3 + 3\text{CO} \longrightarrow 2\text{Fe} + 3\text{CO}_2$						
1c	A	Gas	Hydrogen	Oxygen	Carbon Dioxide			
		Test	burns with a pop	relights a glowing splint	turns lime water milky			
2a	C	Answer	A	B	C	D	E	F
		Ion	Al ³⁺	Cl ⁻	Li ⁺	H ⁺	Br ⁻	OH ⁻
		Electron Arrangement of Ion	2,8	2,8,8	2	0	2,8,18,8	n/a
2b	A+F Both for 1 mark	Positive ions will only form compounds with negative ions ∴ Any combination with two positive ions or two negative ions can be discounted. Aluminium Hydroxide Al(OH) ₃ is the only insoluble combination on page 8 of data booklet						
2c	F	H ⁺ ions are found in all acids and OH ⁻ ions are found in all alkalis						
3a	C	No voltage is obtained when the same metal is attached to itself in a cell						
3b	B+D Both for 1 mark	Gold and lead are being investigated by attaching them to the same metal (tin) in a circuit with the same electrolyte (potassium nitrate solution). The results obtained would show that the direction of electron flow is the same from tin to the lead/gold so both metals are below tin in the electrochemical series. The voltage obtained from the tin/gold cell will be greater than the tin/lead cell so lead must be nearer tin on the electrochemical series and therefore higher up the electrochemical series.						
4a	D	Carbohydrate	fructose	glucose	maltose	starch	sucrose	
		Formula	C ₆ H ₁₂ O ₆	C ₆ H ₁₂ O ₆	C ₁₂ H ₂₂ O ₁₁	(C ₆ H ₁₀ O ₅) _n	C ₁₂ H ₂₂ O ₁₁	
4b	C+E Both for 1 mark	Type	monosaccharide	monosaccharide	disaccharide	polysaccharide	disaccharide	
		Status	monomer	monomer	dimer	condensation polymer	dimer	
4c	A+B Both for 1 mark	Result of Hydrolysis	no hydrolysis	no hydrolysis	Hydrolyses to two glucose units	Hydrolyses to many glucose units	Hydrolyses to glucose and fructose	
5	B+E Both for 1 mark	<input checked="" type="checkbox"/> A The pH of acids will increase to 7 as water dilutes the acid <input checked="" type="checkbox"/> B Acidity decreases as water is added as concentration of H ⁺ ions decrease <input checked="" type="checkbox"/> C The pH of acids will increase to 7 as water dilutes the acid <input checked="" type="checkbox"/> D Acidity decreases as water is added as concentration of H ⁺ ions decrease <input checked="" type="checkbox"/> E The solution becomes less concentrated as water dilutes the acid						
6a	F	Polymer	poly(ethene)	poly(propene)	poly(chloroethene)	polystyrene		
		Monomer	ethene	propene	chloroethene	styrene		
6b	E	$\begin{array}{ccc} & + \text{H}_2 & \\ & & \text{H} \quad \text{H} \\ \text{H}-\text{C}=\text{C}-\text{H} & \longrightarrow & \text{H}-\text{C}-\text{C}-\text{H} \\ \quad & & \quad \\ \text{H} \quad \text{H} & & \text{H} \quad \text{H} \\ \text{ethene} & & \text{ethane} \end{array}$						
6c	B+D Both for 1 mark	Isomers have same molecular formula but different structural formula:						
		Structure	A	B	C	D	E	F
		Formula	C ₃ H ₃ N	C ₂ H ₂ Cl ₂	C ₄ H ₈	C ₂ H ₂ Cl ₂	C ₂ H ₄	C ₃ H ₆
6d	A+C Both for 1 mark	Monomer 1 has -CH ₃ groups on either side of C=C in monomer ∴ Monomer 1 = Structure C Monomer 2 has -CN group on either side of C=C in monomer ∴ Monomer 2 = Structure A						

7	D,E 1 mark each		Particle	Location	Charge	Mass																		
			Proton	in nucleus	+1	1 amu																		
			Neutron	in nucleus	0	1 amu																		
			Electron	outside nucleus	-1	approx zero																		
8	C,E 1 mark each	<input checked="" type="checkbox"/> A Glucose $C_6H_{12}O_6$ solution is covalent and is a non-conductor <input checked="" type="checkbox"/> B potassium nitrate is an ionic compound and does not conduct in the solid state <input checked="" type="checkbox"/> C metals in the liquid state can conduct electricity <input checked="" type="checkbox"/> D hexane C_6H_{14} is covalent and does not conduct electricity <input checked="" type="checkbox"/> E ionic compounds in both the liquid and solution states can conduct electricity				<table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th>Bonding</th> <th>Solid</th> <th>Liquid</th> <th>Solution</th> </tr> </thead> <tbody> <tr> <td>Metallic <small>(metals only)</small></td> <td>✓</td> <td>✓</td> <td>-</td> </tr> <tr> <td>Covalent <small>(non-metals only)</small></td> <td>x</td> <td>x</td> <td>x</td> </tr> <tr> <td>Ionic <small>(metals + non-metals)</small></td> <td>x</td> <td>✓</td> <td>✓</td> </tr> </tbody> </table>			Bonding	Solid	Liquid	Solution	Metallic <small>(metals only)</small>	✓	✓	-	Covalent <small>(non-metals only)</small>	x	x	x	Ionic <small>(metals + non-metals)</small>	x	✓	✓
		Bonding	Solid	Liquid	Solution																			
Metallic <small>(metals only)</small>	✓	✓	-																					
Covalent <small>(non-metals only)</small>	x	x	x																					
Ionic <small>(metals + non-metals)</small>	x	✓	✓																					

9a	Fe ²⁺	Ferroxyl Indicator turns blue in presence of Fe ²⁺ ions turns pink in presence of OH ⁻ ions																														
9b	OH ⁻	From data booklet page 7: $2\text{H}_2\text{O}(\text{l}) + \text{O}_2(\text{g}) + 4\text{e}^- \longrightarrow 4\text{OH}^-(\text{aq})$																														
9c	Mg provides electrons to Fe	Magnesium protects iron from corroding by sacrificial protection because magnesium is more reactive than iron. Magnesium corrodes and supplies the attached iron metal with the electrons to prevent it from corroding.																														
9d	covalent	Ionic compounds speed up corrosion by providing the ions needed to act as an electrolyte which completes the circuit. Covalent compounds, like ethylene glycol, contain no ions and will not speed up corrosion.																														
10a(i)	$\begin{matrix} 63 \\ 29 \end{matrix} \text{Cu}$	mass number \longrightarrow atomic number \longrightarrow Cu																														
10a(ii)	34	Number of neutrons = mass number - atomic number = 63 - 29 = 34																														
10b	64	The relative atomic mass is the average of the masses of the different isotopes relative atomic mass = $\frac{63+65}{2} = 64$																														
11a(i)	Sodium phosphate	$\underbrace{\text{Metal comes first in the name}}_{\text{sodium}} \quad \underbrace{\text{Non-metal comes second in the name}}_{\text{phosph-}} \quad \underbrace{\text{3}^{\text{rd}} \text{ element is oxygen = -ate}}_{\text{-ate}}$																														
11a(ii)	Restore essential elements to soil	Fertilisers are <ul style="list-style-type: none"> soluble compounds containing at least one element from potassium, phosphorus or nitrogen added to soil to restore the essential element compounds to the soil to aid growth of plants. 																														
11b	Iron	Nitrogen + Hydrogen $\xrightarrow{\text{iron}}$ Ammonia																														
11c	(nitrifying) bacteria	Nitrifying bacteria are found in root nodules in leguminous plants which fix atmospheric nitrogen into nitrogen compounds in plants. e.g. Bean family, Pea family and clover are leguminous plants.																														
12a	36°C to 126°C	Information found on 9 of data booklet <table border="1"> <thead> <tr> <th>Alkane</th> <th>methane</th> <th>ethane</th> <th>propane</th> <th>butane</th> <th>pentane</th> <th>hexane</th> <th>heptane</th> <th>octane</th> </tr> </thead> <tbody> <tr> <td>Formula</td> <td>CH₄</td> <td>C₂H₆</td> <td>C₃H₈</td> <td>C₄H₁₀</td> <td>C₅H₁₂</td> <td>C₆H₁₄</td> <td>C₇H₁₆</td> <td>C₈H₁₈</td> </tr> <tr> <td>Boiling Point</td> <td>-162°C</td> <td>-89°C</td> <td>-42°C</td> <td>-1°C</td> <td>36°C</td> <td>69°C</td> <td>98°C</td> <td>126°C</td> </tr> </tbody> </table>	Alkane	methane	ethane	propane	butane	pentane	hexane	heptane	octane	Formula	CH ₄	C ₂ H ₆	C ₃ H ₈	C ₄ H ₁₀	C ₅ H ₁₂	C ₆ H ₁₄	C ₇ H ₁₆	C ₈ H ₁₈	Boiling Point	-162°C	-89°C	-42°C	-1°C	36°C	69°C	98°C	126°C

12c(i)	Carbon and Hydrogen	Carbon in carbon dioxide must have come from fuel D Hydrogen in water must have come from fuel D Oxygen in carbon dioxide and water might have come from fuel D or from air																														
12c(ii)	Hydrogen	Water is the only product of the combustion of fuel B ∴ the fuel is likely to be hydrogen as the hydrogen in water must have come from the fuel and not the air.																														
13a	Neutralisation	Neutralisation reactions involve the reaction of H ⁺ ions to form water.																														
13b	Increase in temp increases the rate	The reaction rate is inversely proportional to the time taken for the reaction. As the time decreases in the table, the rate of reaction must increase.																														
14a	SO ₄ ²⁻	$\text{Zn}(\text{s}) + \text{Cu}^{2+}(\text{aq}) + \text{SO}_4^{2-}(\text{aq}) \longrightarrow \text{Zn}^{2+}(\text{aq}) + \text{Cu}(\text{s}) + \text{SO}_4^{2-}(\text{aq})$ <p>Cancel out any spectator ions which appear on both sides</p> $\text{Zn}(\text{s}) + \text{Cu}^{2+}(\text{aq}) + \cancel{\text{SO}_4^{2-}(\text{aq})} \longrightarrow \text{Zn}^{2+}(\text{aq}) + \text{Cu}(\text{s}) + \cancel{\text{SO}_4^{2-}(\text{aq})}$ <p>Re-write equation omitting spectator ions</p> $\text{Zn}(\text{s}) + \text{Cu}^{2+}(\text{aq}) \longrightarrow \text{Zn}^{2+}(\text{aq}) + \text{Cu}(\text{s})$																														

14b	$Zn \rightarrow Zn^{2+} + 2e^{-}$	$Zn(s) + Cu^{2+}(aq) \rightarrow Zn^{2+}(aq) + Cu(s)$ Split the redox reaction into its component halves $Zn(s) \rightarrow Zn^{2+}(aq)$ $Cu^{2+}(aq) \rightarrow Cu(s)$ Balance equations by adding electrons into ion-electrons equations $Zn(s) \rightarrow Zn^{2+}(aq) + 2e^{-}$ $Cu^{2+}(aq) + 2e^{-} \rightarrow Cu(s)$ Oxidation reactions have electrons <u>after</u> the arrow Reduction Reactions have electrons <u>before</u> the arrow																							
14c(i)	zinc zinc sulphate solution	copper The metals in a cell should be placed in solutions of that metal <ul style="list-style-type: none"> Copper electrode is placed in copper sulphate solution Zinc electrode is placed in a zinc sulphate solution (any soluble zinc compound can be used as the electrolyte in the zinc electrode beaker) 																							
14c(ii)	To complete the circuit	The ion bridge contains an ionic solution which allows ions to move through the ion bridge to balance the movement of charge from zinc to copper																							
15a	$C_nH_{2n+1}OH$ or $C_nH_{2n+2}O$	<table border="1"> <thead> <tr> <th colspan="2">Ethanol</th> <th colspan="2">Propan-2-ol</th> </tr> </thead> <tbody> <tr> <td>If formula written as:</td> <td>Molecular formula:</td> <td>If formula written as:</td> <td>Molecular formula:</td> </tr> <tr> <td>C_2H_5OH</td> <td>C_2H_6O</td> <td>C_3H_7OH</td> <td>C_3H_8O</td> </tr> <tr> <td>If n=2 then $2n+1=5$</td> <td>If n=2 then $2n+2=6$</td> <td>If n=3 then $2n+1=7$</td> <td>If n=3 then $2n+2=8$</td> </tr> <tr> <td>$\therefore C_nH_{2n+1}OH$</td> <td>$\therefore C_nH_{2n+2}O$</td> <td>$\therefore C_nH_{2n+1}OH$</td> <td>$\therefore C_nH_{2n+2}O$</td> </tr> </tbody> </table>	Ethanol		Propan-2-ol		If formula written as:	Molecular formula:	If formula written as:	Molecular formula:	C_2H_5OH	C_2H_6O	C_3H_7OH	C_3H_8O	If n=2 then $2n+1=5$	If n=2 then $2n+2=6$	If n=3 then $2n+1=7$	If n=3 then $2n+2=8$	$\therefore C_nH_{2n+1}OH$	$\therefore C_nH_{2n+2}O$	$\therefore C_nH_{2n+1}OH$	$\therefore C_nH_{2n+2}O$

15b(i)	Carbon dioxide	$C_6H_{12}O_6 \xrightarrow[\text{(no air)}]{\text{yeast enzymes}} 2C_2H_5OH + 2CO_2$ glucose $\xrightarrow[\text{(no air)}]{\text{yeast enzymes}}$ ethanol + carbon dioxide																							
15b(ii)	Distillation	Distillation is used to produce alcoholic drinks with an alcohol content above 16%. Yeast makes alcohol by anaerobic fermentation but at around 16% alcohol the yeast cannot survive. Distillation separates alcohol from water as ethanol and water have different boiling points and the ethanol is then collected and used in spirit drinks like whisky, vodka, rum, etc.																							
15c	Diagram showing:	$ \begin{array}{ccccccc} & H & H & H & O & & \\ & & & & & & \\ H & -C & -C & -C & -C & -O & -H \\ & & & & & & \\ & H & H & H & & & \end{array} $
