| Question | Answer | Chemistry Covered |
|----------|---|---|
| 9a | 10 | Number of Protons = atomic number (lower number) Number of Neutrons = mass number - atomic number (top number) (lower number) |
| | 10 | |
| | 10 | |
| 9b | Isotopes | Isotopes Same atomic number but different mass number Same number of protons but different number of neutrons |
| 9c | 20 | The average atomic mass = 10.2 from masses of 10,11 and 12. The most common type of atom must be 10 as average 10.2 is closest to 10 |
| 10a | Electrolysis | Electrolysis: Passing electricity through a substance and the substance breaks back down to its elements. |
| 10b | $(Al^{3+})_2(O^{2-})_3$ | Al^{3+} O^{2-} $3 \swarrow \searrow$ 2 $(Al^{3+})_2(O^{2-})_3$ |
| 10c | Ions free to move | Solid Ionic Compounds Ions unable to move in ionic lattice |
| | | Molten Ionic Compounds Ions free to move |
| | | Ionic Compound Solutions Ions free to move |
| 11a | Hydrogen + Carbon | Colourless Liquid in Test Tube A Water formed from burning gas X \therefore Hydrogen in water must have come from gas X |
| | | Colourless Liquid in Test Tube B Carbon Dioxide formed from burning gas X \therefore Carbon in CO_2 must have come from gas X |
| 11b | Observation at A | Colourless Liquid in Test Tube A Water formed from burning hydrogen |
| | Observation at B Colourless liquid forms No change | |
| 12a | Covalent | Hydrogen is a non-metal, chlorine is a non-metal Type of bonding in hydrogen chloride molecule: Covalent |
| 12b | Diagram showing: | |
| 13a | Neutralisation | Acid + Metal Carbonate \rightarrow Salt + Water + Carbon Dioxide hydrochloric acid + calcium carbonate \rightarrow calcium chloride + water + carbon dioxide |
| 13b(i) | Gas given off | The flask loses mass as the gas produced by the chemical reaction leaks out of the top. |
| 13b(ii) | Line graph showing: | $\frac{1}{2}$ mark - both labels with units $\frac{1}{2}$ mark - both scales $\frac{1}{2}$ mark - points plotted correctly $\frac{1}{2}$ mark - points joined up appropriately |
| 13c | Answer: 0.81 - 0.86 | The mass loss must be greater than 0.80g but cannot be higher than 0.86g as this is the mass loss at the end of the reaction. |

| 14a(i) | Ostwald | Ammonia + Oxygen $\xrightarrow[\text{catalyst}]{\text{platinum}}$ Nitrogen Dioxide + Water Nitrogen Dioxide dissolves in Water to make Nitric Acid | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|------------------------------------|---|--|---|-----------------------------------|--------------------------------------|--------------------------------------|--|--|---|--|--|--|-------------------------|-----------------------------------|-----------------------------|--------------------------------------|-----|----------|---|---|------------------------------|--------------------------------------|------------------------------------|------------------------------------|-----|---|---------|--|-----------|--|---------|---------------------------------------|-----------|--|--|-----|------------|--|-----|--|---|-----|--------------|---|-----|---|---|-----|-----------|---|-----|--|--|-----|--|--|
| 14a(ii) | Exothermic Reaction Or heat given off | The Ostwald process is exothermic and the heat energy released during the reaction is enough to keep the reaction hot enough to proceed, as long as there is enough reactants to continue reaction. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 14a(iii) | water | NO ₂ dissolves in water to form nitric acid (air must be present) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 14b | 35% | 1 mol NH ₄ NO ₃ = (2×14) + (4×1) + (3×16) = 28 + 4 + 48 = 80g $\%N = \frac{\text{Weight of N}}{\text{Weight of NH}_4\text{NO}_3} = \frac{28}{80} \times 100 = 35\%$ | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 15a | Y - X - W - Z | <table border="1"> <thead> <tr> <th>Metal</th> <th>Reasoning</th> <th>Possible Metals</th> </tr> </thead> <tbody> <tr> <td>Y</td> <td>Y is most reactive metal as it is the only one which reacts with cold water. | Reacts with dilute acid | Above copper in reactivity series | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| No Reaction with cold water | Below magnesium in reactivity series | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 15b | Hydrogen | W is 3 rd most Reactive metal: | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | | <table border="1"> <tr> <td>No reaction with dilute acid</td> <td>Copper or below in reactivity series</td> </tr> <tr> <td>No Reaction on heating metal oxide</td> <td>Above Mercury in reactivity series</td> </tr> </table> | No reaction with dilute acid | Copper or below in reactivity series | No Reaction on heating metal oxide | Above Mercury in reactivity series | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| No reaction with dilute acid | Copper or below in reactivity series | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| No Reaction on heating metal oxide | Above Mercury in reactivity series | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 15c | <table border="1"> <tr> <td>Metal Y</td> <td>Potassium Sodium Lithium Calcium Magnesium</td> </tr> <tr> <td>One from:</td> <td></td> </tr> <tr> <td>Metal Z</td> <td>Mercury Silver Gold Platinum</td> </tr> <tr> <td>One from:</td> <td></td> </tr> </table> | Metal Y | Potassium Sodium Lithium Calcium Magnesium | One from: | | Metal Z | Mercury Silver Gold Platinum | One from: | | Z is least reactive metal is it is the only metal to release the metal when its metal oxide is heated. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | Metal Y | Potassium Sodium Lithium Calcium Magnesium | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| One from: | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Metal Z | Mercury Silver Gold Platinum | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| One from: | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 16a | Hydrolysis | $\text{starch} + \text{water} \longrightarrow \text{glucose}$ $(\text{C}_6\text{H}_{10}\text{O}_5)_n + n\text{H}_2\text{O} \longrightarrow n\text{C}_6\text{H}_{12}\text{O}_6$ | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 16b | $\text{C}_6\text{H}_{12}\text{O}_6$ \downarrow $2\text{C}_2\text{H}_5\text{OH} + 2\text{CO}_2$ | $\text{glucose} \xrightarrow[\text{(no air)}]{\text{yeast}} \text{alcohol} + \text{carbon dioxide}$ $\text{C}_6\text{H}_{12}\text{O}_6 \longrightarrow 2\text{C}_2\text{H}_5\text{OH} + 2\text{CO}_2$ | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 16c | Distillation | Distillation is the separation of compounds with different boiling points: ethanol boils at 78°C and water boils at 100°C | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 16d | 5 | 1 mol C ₂ H ₅ OH = (2×12) + (6×1) + (1×16) = 24 + 6 + 16 = 46g no. of mol = $\frac{\text{mass}}{\text{gfm}} = \frac{230\text{g}}{46\text{g mol}^{-1}} = 5\text{mol}$ | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 17a | Oxidation | Oxidation is loss of electrons (electrons after the arrow) Reduction is gain of electrons (electrons before the arrow) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 17b | (\longleftarrow) From Right to Left or from Y to X | The reaction at electrode Y produces electrons: 2I ⁻ → I ₂ + 2e ⁻ Electrons travel from electrode Y to electrode X The reaction at electrode X uses up these electrons: Br ₂ + 2e ⁻ → Br ₂ | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 17c | ($\frac{1}{2}$ mark) Add starch ($\frac{1}{2}$ mark) turns blue/black | Starch turns blue/black in the presence of iodine ∴ Iodine turns blue/black in the presence of starch | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| 17d | $\text{Br}_2 + 2e^- \rightarrow 2\text{Br}^-$ | Solution at electrode X contains Bromine Br_2 which reacts with the electrons travelling through the wires from electrode Y to form Bromide Br^- ions. This equation is found on p10 of data booklet. | | | | | | | | | | | | | | | |
|----------------|--|---|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|--|-----------------------------|------------------------------|---------------------|---------------------|------------|--|--------------------|--------------------|--------------------|
| 18a | $\begin{array}{c} \text{H} \quad \text{CN} \\ \quad \\ -\text{C}-\text{C}- \\ \quad \\ \text{H} \quad \text{COOCH}_3 \end{array}$ | A repeating unit is a 2 carbon segment of the main chain | | | | | | | | | | | | | | | |
| 18b | <table border="1"> <thead> <tr> <th>Group</th> <th>carbon</th> <th>hydrogen</th> </tr> </thead> <tbody> <tr> <td>octyl</td> <td>8</td> <td>17</td> </tr> </tbody> </table> | Group | carbon | hydrogen | octyl | 8 | 17 | $\begin{array}{cccccccc} & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} \\ & & & & & & & \\ \text{H} & -\text{C} & -\text{C} & -\text{C} & -\text{C} & -\text{C} & -\text{C} & -\text{C} & -\text{H} \\ & & & & & & & \\ & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} & \text{H} \end{array}$ | | | | | | | | | |
