6b	B	Homologous Series	Alkane	Alkene	Cycloalkane
		1 <sup>st</sup> Member	Methane CH <sub>4</sub>	Ethene C <sub>2</sub> H <sub>4</sub>	Cyclopropane C <sub>3</sub> H <sub>6</sub>
6c	E+F Both for 1 mark	<input checked="" type="checkbox"/> A Propene C <sub>3</sub> H <sub>6</sub> has a different formula so is not an isomer of C <sub>4</sub> H <sub>8</sub> <input checked="" type="checkbox"/> B Cyclopropane C <sub>3</sub> H <sub>6</sub> has a different formula so not an isomer of C <sub>4</sub> H <sub>8</sub> <input checked="" type="checkbox"/> C Propane C <sub>3</sub> H <sub>8</sub> has a different formula so is not an isomer of C <sub>4</sub> H <sub>8</sub> <input checked="" type="checkbox"/> D Butane C <sub>4</sub> H <sub>10</sub> has a different formula so is not an isomer of C <sub>4</sub> H <sub>8</sub> <input checked="" type="checkbox"/> E Butene C <sub>4</sub> H <sub>8</sub> has the same formula but a different structure <input checked="" type="checkbox"/> F Cyclobutane C <sub>4</sub> H <sub>8</sub> has the same formula but a different structure			
7a	D	Nitrogen + Hydrogen $\xrightarrow{\text{iron}}$ Ammonia			
7b	C	ammonia + oxygen $\xrightarrow{\text{platinum}}$ nitrogen dioxide + water			
8	B,E 1 mark each	<input checked="" type="checkbox"/> A alkaline solutions have a pH greater than 7 <input checked="" type="checkbox"/> B alkaline solutions contain ions and conduct electricity <input checked="" type="checkbox"/> C alkaline solutions contain more OH <sup>-</sup> ions than pure water <input checked="" type="checkbox"/> D alkaline solutions neutralise acids like hydrochloric acid <input checked="" type="checkbox"/> E Dilution decreases the concentration of OH <sup>-</sup> ions in an alkali			
9	A,F 1 mark each	<input checked="" type="checkbox"/> A copper carbonate + sulphuric acid → copper sulphate + water + carbon dioxide <input checked="" type="checkbox"/> B lead nitrate + potassium iodide → lead iodide solid + potassium nitrate <input checked="" type="checkbox"/> C potassium hydroxide + nitric acid → potassium nitrate + water <input checked="" type="checkbox"/> D copper is not reactive enough to react with water <input checked="" type="checkbox"/> E silver is not reactive enough to react with hydrochloric acid <input checked="" type="checkbox"/> F ammonium nitrate + sodium hydroxide → ammonia + water + sodium nitrate			

Question	Answer	Chemistry Covered
10a	Man-made or not found in nature	Synthetic materials are not found naturally on Earth and are made by the chemical industry.
10b(i)	Diagram showing:	$  \begin{array}{cccccc}  \text{H} & \text{CH}_3 & \text{H} & \text{CH}_3 & \text{H} & \text{CH}_3 \\    &   &   &   &   &   \\  -\text{C}- & \text{C}- & \text{C}- & \text{C}- & \text{C}- & \text{C}- \\    &   &   &   &   &   \\  \text{H} & \text{COOCH}_3 & \text{H} & \text{COOCH}_3 & \text{H} & \text{COOCH}_3  \end{array}  $
10b(ii)	Addition	In addition polymerisation, C=C double bonds open up to form a polymer with a long chain of C-C single bonds
10c	Carbon monoxide	Carbon monoxide is a toxic gas formed when carbon compounds burn in a limited supply of air.
11a(i)	Fermentation or anaerobic respiration	$  \text{glucose} \xrightarrow[\text{(no air)}]{\text{yeast}} \text{ethanol} + \text{carbon dioxide}  $
11a(ii)	Carbon dioxide	
11b	Balloon doesn't inflate or no gas produced or Enzymes destroyed at 80°C	

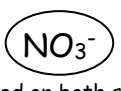

Enzymes do not work at high temperatures and are denatured at these temperatures. Enzymes work best at their optimum temperature (usually  $\sim 37^{\circ}\text{C}$ )

12a	Burns with a pop	<table border="1"> <tr> <td>Gas</td> <td>Hydrogen</td> <td>Oxygen</td> <td>Carbon Dioxide</td> </tr> <tr> <td>Test</td> <td>burns with a pop</td> <td>relights a glowing splint</td> <td>turns lime water milky</td> </tr> </table>	Gas	Hydrogen	Oxygen	Carbon Dioxide	Test	burns with a pop	relights a glowing splint	turns lime water milky																								
Gas	Hydrogen	Oxygen	Carbon Dioxide																															
Test	burns with a pop	relights a glowing splint	turns lime water milky																															
12b	Line graph showing:	<table border="1"> <tr> <td><math>\frac{1}{2}</math> mark - both labels with units</td> <td><math>\frac{1}{2}</math> mark - both scales</td> </tr> <tr> <td><math>\frac{1}{2}</math> mark - points plotted correctly</td> <td><math>\frac{1}{2}</math> mark - points joined up appropriately</td> </tr> </table>	$\frac{1}{2}$ mark - both labels with units	$\frac{1}{2}$ mark - both scales	$\frac{1}{2}$ mark - points plotted correctly	$\frac{1}{2}$ mark - points joined up appropriately																												
$\frac{1}{2}$ mark - both labels with units	$\frac{1}{2}$ mark - both scales																																	
$\frac{1}{2}$ mark - points plotted correctly	$\frac{1}{2}$ mark - points joined up appropriately																																	
12c	42-44cm <sup>3</sup>	Problem Solving: Answer should be taken from graph																																
12d	53cm <sup>3</sup>	Reaction with dilute sulphuric acid was finished at 60seconds At a higher concentration of sulphuric acid will finish before 60seconds but will still produce same final volume of gas (53cm <sup>3</sup> )																																
12e	0.4g	<p>1 mol Mg = 24.5g</p> $\text{no. of mol} = \frac{\text{mass}}{\text{gfm}} = \frac{4.9\text{g}}{24.5\text{g mol}^{-1}} = 0.2\text{mol}$ $\text{Mg} + \text{H}_2\text{SO}_4 \longrightarrow \text{MgSO}_4 + \text{H}_2$ <table style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;">1mol</td> <td></td> <td style="text-align: center;">1mol</td> </tr> <tr> <td style="text-align: center;">0.2mol</td> <td></td> <td style="text-align: center;">0.2mol</td> </tr> </table> <p>1 mol H<sub>2</sub> = 2x1 = 2g</p> $\text{mass} = \text{no. of mol} \times \text{gfm} = 0.2\text{mol} \times 2\text{g mol}^{-1} = 0.4\text{g}$	1mol		1mol	0.2mol		0.2mol																										
1mol		1mol																																
0.2mol		0.2mol																																
13a	Electrodes have same charge at all times	Direct current (d.c.) must be used as this give constant positive and negative electrodes as the direction of electron flow is always the same. Alternating current (a.c.)has reversing current direction so the charge on each electrode would keep changing.																																
13b	Green	Ni <sup>2+</sup> nickel ions are positive because metals always form positive ions. Ni <sup>2+</sup> ions will travel to the negative electrode (electrode A)																																
13c	Ni <sup>2+</sup> CrO <sub>4</sub> <sup>2-</sup>	<table border="1" style="width: 100%;"> <tr> <td style="width: 33%;"> <p>Write down Valency below each element's symbol</p> <p style="text-align: center;">Ni<sup>2+</sup> CrO<sub>4</sub><sup>2-</sup></p> <p style="text-align: center;">2      2</p> </td> <td style="width: 33%;"> <p>Put in Cross-over Arrows</p> <p style="text-align: center;">Ni<sup>2+</sup> CrO<sub>4</sub><sup>2-</sup></p> <p style="text-align: center;">2      2</p> </td> <td style="width: 33%;"> <p>Follow arrows and cancel down to get formula</p> <p style="text-align: center;">Ni<sup>2+</sup>CrO<sub>4</sub><sup>2-</sup></p> </td> </tr> </table>	<p>Write down Valency below each element's symbol</p> <p style="text-align: center;">Ni<sup>2+</sup> CrO<sub>4</sub><sup>2-</sup></p> <p style="text-align: center;">2      2</p>	<p>Put in Cross-over Arrows</p> <p style="text-align: center;">Ni<sup>2+</sup> CrO<sub>4</sub><sup>2-</sup></p> <p style="text-align: center;">2      2</p>	<p>Follow arrows and cancel down to get formula</p> <p style="text-align: center;">Ni<sup>2+</sup>CrO<sub>4</sub><sup>2-</sup></p>
