2014 National 5 Chemistry Marking Scheme

Long Qu	Answer	Reasoning																								
1a	Repulsion/deflection by (positive) nucleus	Positive (alpha) particles mainly travel straight through the layer of gold. Some of the positive (alpha) particles travel close to the nuclei of the gold atoms. The nuclei of the gold atoms are also positive and deflect the passing positive (alpha) particles by repulsion of positives charges.																								
1b(i)	<table border="1"> <tr><td>79</td></tr> <tr><td>79</td></tr> <tr><td>118</td></tr> </table>	79	79	118	Number of protons = atomic number = 79 Number of electrons = atomic number - charge = 79 - 0 = 79 Number of neutrons = mass no - atomic no. = 197 - 79 = 118

Polymerisation	Description																									
Addition	C=C double bonds in monomers join together to form a long chain of C-C single bonds.																									
Condensation	Water molecules are removed as monomers join together to make larger polymer.																									

5a	Alpha	Radiation	Stopped by	Charge	Atomic Number	Mass Number	
		Alpha	Paper	Positive	2	4	
		Beta	Aluminium	Negative	-1	0	
		Gamma	lead	No charge	Gamma radiation is a wave not a particle		
5b	$\frac{1}{4}$	Time (days)	Fraction				
		0	1	100%			
		8	$\frac{1}{2}$	50%			
16	$\frac{1}{4}$	25%					
5c	Sodium	Mass number of X = 28 - 4 = 24 Atomic number of X = 13 - 2 = 11 ∴ Element 11 = sodium					
6	Open Question Answer to include:	3 mark answer		2 mark answer		1 mark answer	
		Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.		Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.		Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.	
7a(i)	Haber Process	Nitrogen + Hydrogen $\xrightarrow{\text{iron catalyst}}$ Ammonia					
7a(ii)	Diagram showing:						
7b(i)		Arrow pointing from nitrogen monoxide produced by the absorber at the bottom of diagram leading to the nitrogen monoxide produced by the reactor.					
	7b(ii)	Water or H ₂ O	Nitric acid is made by dissolving nitrogen dioxide in water to form nitric acid. Some nitrogen monoxide is also formed during the reaction which is recycled back into the process.				
7c(i)	Neutralisation	Neutralisation: Acid + Metal Hydroxide \longrightarrow Salt + Water					
7c(ii)	Answer to include:	Place potassium nitrate solution in an evaporation basin and boil dry using a Bunsen burner					
8a	One answer from:	Perfumes, flavourings or solvents					
8b(i)	hydroxyl	The -OH group of the hydroxyl group.					
8b(ii)	Any structure from:	Correct C ₅ H ₁₁ OH diagram of:					
		pentan-1-ol	pentan-2-ol	pentan-3-ol			
		2-methylbutan-1-ol		2,2-dimethylpropan-1-ol			
		2-methylbutan-2-ol		3-methylbutan-2-ol			
NB: diagram must be different from 3-methylbutan-1-ol in question and not a redrawing of same 3-methylbutan-1-ol structure.							

8b(iii)	$C_nH_{2n+1}COOH$ or $C_nH_{2n+1}CO_2H$	 methanoic acid $HCOOH$ where n=0: $C_nH_{2n+1}COOH$	 ethanoic acid CH_3COOH where n=1: $C_nH_{2n+1}COOH$	 propanoic acid C_2H_5COOH where n=2: $C_nH_{2n+1}COOH$																										
8c	X= ethanol Y= propanoic acid	Problem Solving: Deduction from information in a table																												
9a	<table border="1" data-bbox="379 465 456 734"> <tr><td>✓</td></tr> <tr><td></td></tr> <tr><td>✓</td></tr> <tr><td></td></tr> <tr><td></td></tr> </table>	✓		✓			They have similar chemical properties	✓	Propane and butane are both members of the alkane family and have the same chemical properties.																					
✓																														
✓																														
		They have the same molecular formula		Propane is C_3H_8 and Butane is C_4H_{10}																										
		They have the same general formula	✓	All alkanes have the general formula C_nH_{2n+2}																										
		They have the same physical properties		Alkanes have gradually changing physical properties e.g. bpt of propane = $-42^\circ C$ and bpt of butane = $-1^\circ C$																										
		They have the same formula mass		gfm propane $C_3H_8 = 44g$ gfm butane $C_4H_{10} = 58g$																										
9b	Answer to include:	Butane C_4H_{10} has more carbons than propane C_3H_8 . The larger the molecules the higher the boiling point due to (Higher would be London Dispersal Forces but this is NAT5)																												
9c	3135	<table data-bbox="608 891 1489 1070"> <tr> <td>E_h</td> <td>=</td> <td>c</td> <td>×</td> <td>m</td> <td>×</td> <td>ΔT</td> </tr> <tr> <td>Energy</td> <td>=</td> <td>specific heat capacity</td> <td>×</td> <td>mass</td> <td>×</td> <td>change in temperature</td> </tr> <tr> <td>Energy</td> <td>=</td> <td>4.18</td> <td>×</td> <td>25</td> <td>×</td> <td>30</td> </tr> <tr> <td>Energy</td> <td>=</td> <td>3135kJ</td> <td></td> <td></td> <td></td> <td></td> </tr> </table>	E_h	=	c	×	m	×	ΔT	Energy	=	specific heat capacity	×	mass	×	change in temperature	Energy	=	4.18	×	25	×	30	Energy	=	3135kJ

A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.												
3 mark answer	2 mark answer	1 mark answer																		
Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.
