2019 National 5 Chemistry Marking Scheme

Long Qu	Answer	Reasoning								
1a	network	SiO ₂ is a covalent compound as both elements in the compound are non-metals. If the covalent compound has a high melting point it is a covalent network compounds. If it has a low melting and boiling point then it is covalent molecular.								
1b(i)	Isotope	<table style="width: 100%; border: none;"> <tr> <td style="width: 33%; text-align: center;">Same</td> <td style="width: 33%; text-align: center;">Atomic number Number of protons</td> <td style="width: 33%; text-align: center;">Different</td> <td style="width: 33%; text-align: center;">Mass number Number of neutrons</td> </tr> </table>	Same	Atomic number Number of protons	Different	Mass number Number of neutrons				
Same	Atomic number Number of protons	Different	Mass number Number of neutrons							
1b(ii)	Different number of neutrons	Both isotopes of boron have 5 protons as they have an atomic number of 5. The ¹⁰ B isotope has 5 neutrons and the ¹¹ B isotope has 6 neutrons, calculated by number of neutrons = mass number - atomic number								
1b(iii)	More ¹¹ B isotope	The RAM (Relative Atomic Mass) is the average mass of the different isotopes. As the average is much closer to 11, there must be more ¹¹ B isotope in the sample.								
1c	120	$24\% \text{ of } 500\text{g} = \frac{24}{100} \times 500 = 120\text{g}$								
2a	Hydroxyl	<table border="1" style="margin: auto; border-collapse: collapse;"> <tr> <td style="text-align: center; padding: 5px;"> —O—H hydroxyl group </td> <td style="text-align: center; padding: 5px;"> $\begin{array}{c} \text{O} \\ \\ \text{—C—OH} \end{array}$ carboxyl group </td> </tr> </table>	—O—H hydroxyl group	$\begin{array}{c} \text{O} \\ \\ \text{—C—OH} \end{array}$ carboxyl group						
—O—H hydroxyl group	$\begin{array}{c} \text{O} \\ \\ \text{—C—OH} \end{array}$ carboxyl group									
2b	enzyme	Problem Solving: Retrieving information from a passage								
2c	calcium oxalate	Acids react with bases to form salts. Oxalic acid reacts with calcium ions to form the salt calcium oxalate								
2d	90	Lactic acid is the harmless product mentioned in the text. Formula of lactic acid = C ₃ H ₆ O ₃ 1 mol = (3x12) + (6x1) + (3x16) = 36 + 6 + 48 = 90								
3a	One diagram from:									
3b	Blue or purple	Ammonia NH ₃ gas dissolves in water to form alkaline ammonium hydroxide solution. Alkali on the damp/moist pH paper will turn blue/purple. $\text{NH}_3(\text{g}) + \text{H}_2\text{O}(\text{l}) \longrightarrow \text{NH}_4^+(\text{aq}) + \text{OH}^-(\text{aq})$ <p style="text-align: center; font-size: small;">ammonia water ammonium ion hydroxide ion</p>								
3c(i)	Increase in temperature decrease in percentage	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr> <td style="width: 10%;">One From:</td> <td style="width: 20%;">As the temperature increases yield/% decreases.</td> <td style="width: 20%;">As the temperature decreases the yield/% increases.</td> <td style="width: 20%;">The yield/% increases as the temperature decreases.</td> <td style="width: 20%;">The yield/% decreases as the temperature increases.</td> </tr> </table> <p>Cause and Effect: It must be a change of temperature and its effect on yield so "as yield of ammonia decreases, temperature gets higher" is incorrect</p>	One From:	As the temperature increases yield/% decreases.	As the temperature decreases the yield/% increases.	The yield/% increases as the temperature decreases.	The yield/% decreases as the temperature increases.			
One From:	As the temperature increases yield/% decreases.	As the temperature decreases the yield/% increases.	The yield/% increases as the temperature decreases.	The yield/% decreases as the temperature increases.						
3c(ii)	Graph showing:	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 25%; text-align: center;">1 mark</td> <td style="width: 25%; text-align: center;">1 mark</td> <td style="width: 25%; text-align: center;">1 mark</td> <td style="width: 25%; text-align: center;">1 mark</td> </tr> <tr> <td style="font-size: small;">One mark is awarded for a graph which shows points plotted rather than bars.</td> <td style="font-size: small;">The axis/axes of the graph has/have suitable scale(s). <ul style="list-style-type: none"> plotted points occupies at least half of the width and half of the height of the graph paper The axes have suitable scales </td> <td style="font-size: small;">The axes of the graph have suitable labels and units.</td> <td style="font-size: small;">All data points plotted accurately (within a half box tolerance) with either a line of best fit drawn or plots joined by curve. This mark can only be accessed if linear scales for both axes have been provided.</td> </tr> </table>	1 mark	1 mark	1 mark	1 mark	One mark is awarded for a graph which shows points plotted rather than bars.	The axis/axes of the graph has/have suitable scale(s). <ul style="list-style-type: none"> plotted points occupies at least half of the width and half of the height of the graph paper The axes have suitable scales 	The axes of the graph have suitable labels and units.	All data points plotted accurately (within a half box tolerance) with either a line of best fit drawn or plots joined by curve. This mark can only be accessed if linear scales for both axes have been provided.
1 mark	1 mark	1 mark	1 mark							
One mark is awarded for a graph which shows points plotted rather than bars.	The axis/axes of the graph has/have suitable scale(s). <ul style="list-style-type: none"> plotted points occupies at least half of the width and half of the height of the graph paper The axes have suitable scales 	The axes of the graph have suitable labels and units.	All data points plotted accurately (within a half box tolerance) with either a line of best fit drawn or plots joined by curve. This mark can only be accessed if linear scales for both axes have been provided.							
3d(i)	Electrolysis and lithium nitride	Processes are in the circular boxes. Electrolysis is the circular box answer Chemicals are in the square boxes. Lithium nitride is formed from lithium and nitrogen.								

3d(ii)	One arrow drawn from:																									
4a	nucleus	All nuclear reactions take place in the nucleus.																								
4b(i)	One answer from:	<table border="1"> <tr> <td>The time for half of the mass to decay</td> <td>The time for half of the (radio)activity to decay</td> <td>The time for half of the nuclei to decay</td> </tr> </table>	The time for half of the mass to decay	The time for half of the (radio)activity to decay	The time for half of the nuclei to decay																					
The time for half of the mass to decay	The time for half of the (radio)activity to decay	The time for half of the nuclei to decay

Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.																		
3 mark answer	2 mark answer	1 mark answer																								
Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.																								
7a	Same/similar chemical properties <u>and</u> same general formula.	Members of the same homologous series have the same/similar properties e.g. all alkenes will decolourise bromine solution quickly. The general formula must fit all members of the homologous series e.g. all alkanes fit the general formula C _n H _{2n+2} e.g. methane CH ₄ , ethane C ₂ H ₆ , propane C ₃ H ₈ .																								
7b(i)	Alkane	The hydrocarbon C ₂₅ H ₅₂ must belong to the alkane family as it fits the general formula of alkanes of C _n H _{2n+2} . In n=35 then 2n+2 = (2×25) + 2 = 50+2 = 52 ∴ C ₂₅ H ₅₂																								
7b(ii)	C ₃₅ H ₇₂	General Formula C _n H _{2n+2} where number of H atoms = 72. Hydrogen number 2n+2 = 72 ∴ 2n = 70 ∴ n=35 ∴ formula = C ₃₅ H ₇₂

9a	Exothermic	Type of Reaction		Definition			
		Exothermic		Reaction which releases energy			
		Endothermic		Reaction which takes in energy from the surroundings			
9b(i)	0.05	heat energy = specific heat capacity \times mass \times change in Temperature $E_h = C \times m \times \Delta T$ $8.36 = 4.18 \times m \times 40$ $m = \frac{8.36}{4.18 \times 40} = 0.05\text{kg}$					
9b(ii)	Both answers:	Copper is a better conductor of heat Lower heat loss to surroundings					
9c(i)	One answer from:	if the -OH group is at the end of alcohols an aldehyde is produced			if the -OH group is in the middle of alcohol an ketone is produced		
9c(ii)	$\begin{array}{ccccccc} \text{H} & \text{H} & \text{H} & \text{H} & & \text{O} & \\ & & & & & // & \\ \text{H}-\text{C}-\text{C}-\text{C}-\text{C}-\text{C} & & & & & & \\ & & & & & & \\ \text{H} & \text{H} & \text{H} & \text{H} & & & \text{H} \end{array}$	If OH is on the end carbon then an aldehyde is formed. Starting chemical is pentan-1-ol with -OH hydroxyl group on the end of molecule. Five carbon aldehyde is formed with C=O group on the end carbon.					
10a	Ion bridge or salt bride	The ion bridge is a piece of filter paper soaked in electrolyte. Electrolyte is a salt solution which provides the ions to complete the circuit and allow current to flow through the wires.					
10b(i)	Arrow through wires from right to left	Electrons flow through wires and ions flow through the solution. Electrons are generated in the reaction in beaker B: $2\text{I}^-_{(\text{aq})} \rightarrow \text{I}_{2(\text{l})} + 2e^-$ Electrons flow through voltmeter to Beaker A and join up by the Fe^{3+} ions $\text{Fe}^{3+}_{(\text{aq})} + e^- \rightarrow \text{Fe}^{2+}_{(\text{aq})}$					
10b(ii)	oxidation	$2\text{I}^-_{(\text{aq})} \rightarrow \text{I}_{2(\text{l})} + 2e^-$					

10b(iii)	$2\text{Fe}^{3+} + 2\text{I}^-$ \downarrow $2\text{Fe}^{2+} + \text{I}_2$	$\text{Fe}^{3+} + 2\text{I}^- \rightarrow \text{I}_2 + 2\text{e}^-$ $\text{Fe}^{3+} + \text{e}^- \rightarrow \text{Fe}^{2+}$ <p>Multiple equations to get same number of electrons</p> $2\text{Fe}^{3+} + 2\text{I}^- \rightarrow \text{I}_2 + 2\text{Fe}^{2+}$ <p>Cancel out electrons add equations together</p> $2\text{Fe}^{3+} + 2\text{I}^- \rightarrow 2\text{Fe}^{2+} + \text{I}_2$						
10c	Conducts electricity	Graphite has delocalised electrons that do not take part in the covalent bonding and are free to jump from atom to atom to allow electrical conduction.

Write down Valency below each element's symbol	Put in Cross-over Arrows	Follow arrows to get formula						
$\text{Ca} \quad \text{CO}_3$ $2 \quad 2$	$\text{Ca} \quad \text{CO}_3$ $2 \quad 2$	$\text{Ca}_2(\text{CO}_3)_2$ <p>Cancel Down</p> CaCO_3						
11b	propanoic acid	$\text{acid} + \text{metal carbonate} \rightarrow \text{salt} + \text{water} + \text{carbon dioxide}$ $\text{propanoic acid} + \text{calcium carbonate} \rightarrow \text{calcium propanoate} + \text{water} + \text{carbon dioxide}$						
11c	One answer from:	<table border="1"> <tr> <td>no more solid reacts/ until it no longer reacts</td> <td>solid remains/is left (at bottom of the beaker)</td> <td>a gas is no longer produced no more fizzing/bubbling</td> </tr> <tr> <td>calcium carbonate left (at the bottom)</td> <td>no more calcium carbonate reacts</td> <td>neutral/neutralised with a description of testing pH.</td> </tr> </table>	no more solid reacts/ until it no longer reacts	solid remains/is left (at bottom of the beaker)	a gas is no longer produced no more fizzing/bubbling	calcium carbonate left (at the bottom)	no more calcium carbonate reacts	neutral/neutralised with a description of testing pH.
no more solid reacts/ until it no longer reacts	solid remains/is left (at bottom of the beaker)	a gas is no longer produced no more fizzing/bubbling						
calcium carbonate left (at the bottom)	no more calcium carbonate reacts	neutral/neutralised with a description of testing pH.						
11d	Filtration Evaporation	Filtration is needed to separate the unreacted calcium carbonate from the products. The residue of filtration is calcium propanoate solution. The solid propanoate is recovered by evaporating the water in the solution using an evaporating basin and a Bunsen burner.						
12a(i)	standard	A standard solution is a solution whose concentration is accurately know. It can then be used to work out the concentration of another solution with which it reacts with.						
12a(ii)	21.2	$\text{no. of mol} = \text{volume} \times \text{concentration} = 0.2 \text{ litres} \times 1 \text{ mol l}^{-1} = 0.2 \text{ mol}$ $\text{gfm Na}_2\text{CO}_3 = (2 \times 23) + (1 \times 12) + (3 \times 16) = 46 + 12 + 48 = 106 \text{ g mol}^{-1}$ $\text{mass} = \text{no of mol} \times \text{gfm} = 0.2 \text{ mol} \times 106 \text{ g mol}^{-1} = 21.2 \text{ g}$						
12b(i)	One answer from:	<table border="1"> <tr> <td>Move burette/ sodium carbonate (reading) to eye level</td> <td>Reduce distance between flask and burette</td> <td>Use white tile/paper</td> <td>Clamp the burette towards the centre</td> </tr> </table>	Move burette/ sodium carbonate (reading) to eye level	Reduce distance between flask and burette	Use white tile/paper	Clamp the burette towards the centre		
Move burette/ sodium carbonate (reading) to eye level	Reduce distance between flask and burette	Use white tile/paper	Clamp the burette towards the centre					
12b(ii)	One answer from:	<table border="1"> <tr> <td>To show the end-point</td> <td>To show point of neutralisation</td> <td>To show completion of the reaction</td> </tr> </table>	To show the end-point	To show point of neutralisation	To show completion of the reaction			
To show the end-point	To show point of neutralisation	To show completion of the reaction						
12b(iii)	concordant	<p>Titration using a burette allow exact volumes of solutions to be worked out. After the initial titration to allow a rough volume for the reaction to be found, the experiment is repeated exactly in a more accurate way to work out the exact volume of solution needed to completely react. This is repeated until two volumes within $\pm 0.2 \text{ cm}^3$ of each other are achieved. These are described as concordant. The concordant volumes are averaged and the rough titre is ignored.</p>						
12b(iv)	1.5	$\text{no. of mol Na}_2\text{CO}_3 = \text{volume} \times \text{concentration} = 0.015 \text{ litres} \times 1 \text{ mol l}^{-1} = 0.015 \text{ mol}$ $\text{Na}_2\text{CO}_3 + 2\text{HCl} \rightarrow 2\text{NaCl} + \text{H}_2\text{O} + \text{CO}_2$ $\begin{array}{ccc} 1 \text{ mol} & 2 \text{ mol} & \\ 0.015 \text{ mol} & 0.030 \text{ mol} & \end{array}$ $\text{concentration} = \frac{\text{no of moles}}{\text{volume}} = \frac{0.030 \text{ mol}}{0.02 \text{ litres}} = 1.5 \text{ mol l}^{-1}$						
13	Open Question:	<table border="1"> <thead> <tr> <th>3 mark answer</th> <th>2 mark answer</th> <th>1 mark answer</th> </tr> </thead> <tbody> <tr> <td>Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.</td> <td>Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.</td> <td>Demonstrates a limited understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.
3 mark answer	2 mark answer	1 mark answer						
Demonstrates a good understanding of the chemistry involved. A good comprehension of the chemistry has provided in a logically correct, including a statement of the principles involved and the application of these to respond to the problem.	Demonstrates a reasonable understanding of the chemistry involved, making some statement(s) which are relevant to the situation, showing that the problem is understood.	Demonstrates a limited understanding of the chemistry involved. The candidate has made some statement(s) which are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.
