Scottish Qualifications Authority

Detailed Marking Instructions – Higher Physics

1. General Marking Instructions

SQA published Physics General Marking Instructions in July 1999. Please refer to this publication when interpreting the detailed Marking Instructions.

2. Recording of marks

The following additional advice was given to markers regarding the recording of marks on candidate scripts.

- (a) The total mark awarded for each question should be recorded in the outer margin. The inner margin should be used to record the mark for each part of a question as indicated in the detailed marking instructions.
- (b) The fine divisions of marks shown in the detailed Marking Instructions may be recorded within the body of the script beside the candidate's response. Where such marks are shown they must total to the mark in the inner margin.
- (c) Numbers recorded on candidate scripts should always be the marks being awarded. Negative marks or marks to be subtracted should not be recorded on scripts.
- (d) The number out of which a mark is scored should **never** be recorded as a **denominator**. ($\frac{1}{2}$ mark will always mean one half mark and never 1 out of 2)
- (e) Where square ruled paper is enclosed inside answer books it should be clearly indicated that this item has been considered by the marker. The mark awarded should be transferred to the script booklet inner margin and marked G.
- (f) The mark awarded for each question should be transferred to the grid on the back of the script. When the marker has completed marking the candidate's response to all questions, the marks for individual questions are added to give the total script mark.
- (g) The total mark awarded for an individual question may include an odd half mark – $\frac{1}{2}$. If there is an odd half mark in the total script mark, this is rounded up to the next whole number when transferred to the box on the front of the script.

3. Other Marking Symbols which may be used

- TICK – Correct point as detailed in scheme, includes data entry
- SCORE THROUGH – Any part of answer which is wrong. (For a block of wrong answer indicate zero marks.)
- INVERTED VEE – A point omitted which has led to a loss of marks.
- WAVY LINE – Under an answer worth marks which is wrong only because a wrong answer has been carried forward from a previous part.
- “G” – Reference to a graph on separate paper. You MUST show a mark on the graph paper and the SAME mark on the script.

4. Marking Symbols which may NOT be used.

- “WP” – Marks not awarded because an apparently correct answer was due to the use of “wrong physics”.
- “ARITH” – Candidate has made an arithmetic mistake.
- “SIG FIGS” or “SF” – Candidate has made a mistake in the number of significant figures for a final answer.

Physics – Marking Issues

The current in a resistor is 1.5 amperes when the potential difference across it is 7.5 volts. Calculate the resistance of the resistor.

	Answers	Mark +comment	Issue
1.	V=IR 7.5=1.5R R=5.0Ω	(½) (½) (1)	Ideal Answer
2.	5.0Ω	(2) Correct Answer	GMI 1
3.	5.0	(1½) Unit missing	GMI 2(a)
4.	4.0Ω	(0) No evidence/Wrong Answer	GMI 1
5.	_____Ω	(0) No final answer	GMI 1
6.	$R = \frac{V}{I} = \frac{7.5}{1.5} = 4.0\Omega$	(1½) Arithmetic error	GMI 7
7.	$R = \frac{V}{I} = 4.0\Omega$	(½) Formula only	GMI 4 and 1
8.	$R = \frac{V}{I} = \text{_____}\Omega$	(½) Formula only	GMI 4 and 1
9.	$R = \frac{V}{I} = \frac{7.5}{1.5} = \text{_____}\Omega$	(1) Formula + subs/No final answer	GMI 4 and 1
10.	$R = \frac{V}{I} = \frac{7.5}{1.5} = 4.0$	(1) Formula + substitution	GMI 2(a) and 7
11.	$R = \frac{V}{I} = \frac{1.5}{7.5} = 5.0\Omega$	(½) Formula but wrong substitution	GMI 5
12.	$R = \frac{V}{I} = \frac{7.5}{1.5} = 5.0\Omega$	(½) Formula but wrong substitution	GMI 5
13.	$R = \frac{I}{V} = \frac{7.5}{1.5} = 5.0\Omega$	(0) Wrong formula	GMI 5
14.	V=IR 7.5 = 1.5 × R R=0.2Ω	(1½) Arithmetic error	GMI 7
15.	V=IR $R = \frac{I}{V} = \frac{1.5}{7.5} = 0.2\Omega$	(½) Formula only	GMI 20

30. (a)	$f = \frac{v}{\lambda} \quad (\frac{1}{2})$ $= \frac{3 \times 10^8}{605 \times 10^{-9}} \quad (\frac{1}{2})$ $(= 4.96 \times 10^{14} \text{ Hz})$ $E = h f_{(0)} \quad (\frac{1}{2}) \text{ independent}$ $= 6.63 \times 10^{-34} \times 4.96 \times 10^{14} \quad (\frac{1}{2})$ $= 3.29 \times 10^{-19} \text{ (J)}$ <p>OR</p> $E = h \frac{v}{\lambda} \quad (1)$ $= \frac{6.63 \times 10^{-34} \times 3 \times 10^8}{605 \times 10^{-9}} \quad (1)$ $= 3.29 \times 10^{-19} \text{ (J)}$	<p>final line required - otherwise deduct ($\frac{1}{2}$) If: $E = hf_{(0)}$</p> $= 6.63 \times 10^{-34} \times 4.96 \times 10^{14}$ $= 3.29 \times 10^{-19} \text{ J}$ <p>ie frequency has just 'appeared' - max ($\frac{1}{2}$) for equation</p>	2•	5
(b) (i)	$E_k = 5.12 \times 10^{-19} - 3.29 \times 10^{-19}$ $= 1.83 \times 10^{-19} \text{ J} \quad (1)$	Negative answer W.P. (0)	1•	
(ii)	<p>Current/Ammeter reading decreases (1)</p> <p>Irradiance decreases:</p> <ul style="list-style-type: none"> • fewer photons hitting plate per second ($\frac{1}{2}$) • fewer electrons released/one electron per photon ($\frac{1}{2}$) • Rate required for 2 marks Max ($\frac{1}{2}$) if this is not mentioned anywhere in the answer • If go on after correct answer with W.P. then deduct ($\frac{1}{2}$) 	<p>Look for (A) reading first.</p> <p>$I \propto I$ not justified</p> <p>Ignore intensity (the word)</p> <p>$I = Nh\nu$ – on own (0)</p> <p>Less radiation on plate (0)</p>	2+	

2007 Physics – Higher			
Sample Answer and Mark Allocation		Notes	Inner Margin
31. (a)	Decrease in mass = $398.626 \times 10^{-27} - (391.970 \times 10^{-27} + 6.645 \times 10^{-27})$ ^(1/2) $= 1.1 \times 10^{-29} \text{ (kg)}$ ^(1/2) $E = mc^2$ ^(1/2) independent $= 1.1 \times 10^{-29} \times (3 \times 10^8)^2$ ^(1/2) $= 9.9 \times 10^{-13} \text{ J}$ ⁽¹⁾	If truncated mass values used, then max (1/2) for $E = mc^2$. If don't show square value $E = 1.1 \times 10^{-29} \times 3 \times 10^8$ - then max (1 1/2) $E = mc^2$ before and after and then subtract energies without rounding can get (3)	3
(b)	$(D = \dot{D} t)$ $= 4.0 \times 10^{-6} \times 2$ ^(1/2) $= 8.0 \times 10^{-6} \text{ (Gy)}$ ^(1/2) $H = D W_R$ ^(1/2) anywhere $= 8.0 \times 10^{-6} \times 3$ ^(1/2) $= 2.4 \times 10^{-5} \text{ Sv}$ ⁽¹⁾ $= (24 \mu\text{Sv})$ or $\dot{H} = \dot{D} W_R$ ^(1/2) $= 4 \times 3$ ^(1/2) $= 12 \mu\text{Svh}^{-1}$ ^(1/2) $\dot{H} = \frac{H}{t}$ $12 = \frac{H}{2}$ ^(1/2) $H = 24 \mu\text{Sv}$ ⁽¹⁾	All ($\times 10^{-6}$) terms may be omitted and final answer given in μSv . $H = D.W_R$ anywhere ^(1/2) $H = D.W_R$ ^(1/2) max $= 4 \times 10^{-6} \times 3$ (WP) Can change to seconds, but if only change one quantity then (2 1/2) max - gives $H = 1.7 \times 10^{-1} \text{ Sv}$ Accept $\left. \begin{matrix} Q \\ W \end{matrix} \right\}$ Instead of W_R	3
