# 2018 Nat5 Physics Marking Scheme

Question	Answer	Physics Covered																	
1	E	Vector Quantity	force	velocity	displacement	acceleration	weight												
		Scalar Quantity	mass	<b>speed</b>	distance	time	energy												
2	D	Total distance = 50m + 120m + 50m + 120m = 340m Displacement = 0m as start and end positions are the same.																	
3	E	<input checked="" type="checkbox"/> A there is the force of gravity acting on the ball in the vertical direction <input checked="" type="checkbox"/> B there is no horizontal force acting on a ball thrown vertically <input checked="" type="checkbox"/> C once the ball stops moving upwards there is no upwards force acting on the ball <input checked="" type="checkbox"/> D there is no upwards force to balance the force of gravity pulling on the ball <input checked="" type="checkbox"/> E Only force of gravity is acting on the ball in the downwards direction once it stops moving up																	
4	C	$E_w = ? \qquad F = 120 \text{ N} \qquad d = 25 \text{ m}$ $E_w = F \times d$ $E_w = 120 \times 25$ $E_w = 3000 \text{ J}$ $P = ? \qquad E = 3000 \text{ J} \qquad t = 5.0 \text{ s}$ $P = \frac{E}{t} = \frac{3000}{5.0} = 600 \text{ W}$																	
5	A	A galaxy is a collection of stars. Each star may have a solar system where a collection of planets orbiting around a star. Each planet may have natural moons orbiting those planets or artificial satellites in orbit.																	
6	C	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 25%;">Satellite</th> <th style="width: 25%;">Iridium-124</th> <th style="width: 25%;">Satellite</th> <th style="width: 25%;">Astra-5B</th> </tr> </thead> <tbody> <tr> <td>Orbital Height</td> <td>630 km</td> <td>23000 km</td> <td>36000 km</td> </tr> <tr> <td>Period</td> <td>97 minutes</td> <td>(835 minutes)</td> <td>1440 minutes</td> </tr> </tbody> </table> Satellite has orbital height between Iridium-124 & Astra-5B ∴ satellite has period between Iridium-124 & Astra-5B						Satellite	Iridium-124	Satellite	Astra-5B	Orbital Height	630 km	23000 km	36000 km	Period	97 minutes	(835 minutes)	1440 minutes
Satellite	Iridium-124	Satellite	Astra-5B																
Orbital Height	630 km	23000 km	36000 km																
Period	97 minutes	(835 minutes)	1440 minutes																
7	D	Rocket travels at constant speed. There is no air resistance to slow the rocket down. so when the engines are turned off forces are balanced and the spacecraft travels at a constant speed in a straight line.																	
8	A	<input checked="" type="checkbox"/> A Mass is the same, weight is greater as gravitational field strength is greater. <input checked="" type="checkbox"/> B Mass does not change regardless of the planet's gravitational field strength <input checked="" type="checkbox"/> C For weight to be same, the gravitational field strength would need to be the same <input checked="" type="checkbox"/> D Mass does not change regardless of the planet's gravitational field strength <input checked="" type="checkbox"/> E For weight to be less, the gravitational field strength would need to be less																	
9	D	$d = v \times t$ $d = 3 \times 10^8 \times 8.6 \times 365.25 \times 24 \times 60 \times 60$ $d = 8.1 \times 10^{16} \text{ m}$																	
10	C	line spectrum from star  Element X  Element Y  Element Z 																	
11	E	<b>Statement I - Correct</b>		<b>Statement II - Correct</b>		<b>Statement III - Correct</b>													
		In an a.c. circuit the direction of the current <i>does</i> change regularly		In a d.c. circuit negative charges <i>do</i> flow in one direction only.		In an a.c. circuit the size of the current <i>does</i> vary with time.													

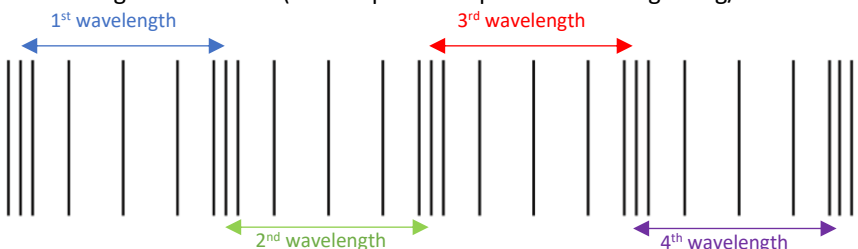

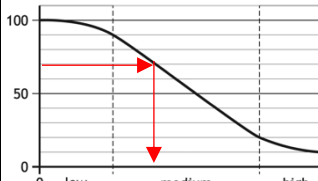

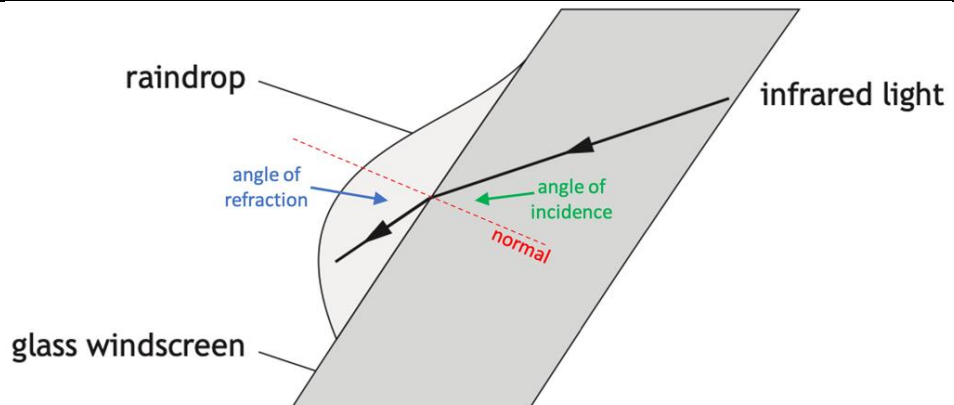

12	D	<b>Observation</b>	<b>Conclusion</b>	<b>Answers Ruled Out</b>	
		Particle Bends towards Q	Particle and Q cannot have same charge	<input checked="" type="checkbox"/> B	<input checked="" type="checkbox"/> E
		Particle Bends away from R	Particle and R have same charge	<input checked="" type="checkbox"/> A	<input checked="" type="checkbox"/> C
13	A	Voltage Across In Thermistor	Voltage Across Variable Resistor	LED	
		<b>Decreases</b>	<b>Increases</b>	<b>Switches On</b>	
		Increasing the temperature of a thermistor decreases the resistance of the thermistor. Decreasing the resistance of the thermistor will decrease the voltage over the thermistor	If the voltage over the thermistor decreases the voltage over the variable resistor will increase at same time.	The decrease in voltage over the thermistor and increase in voltage over the variable resistor leads to the transistor switching on	
14	C	Combining Parallel Resistors:		Combining Series Resistors:	
					
		$\frac{1}{R_T} = \frac{1}{R_1} + \frac{1}{R_2}$ $\frac{1}{R_T} = \frac{1}{12} + \frac{1}{12}$ $\frac{1}{R_T} = \frac{2}{12}$ $R_T = 6 \Omega$		$R_T = 12 + 6 = 18 \Omega$	
15	B	$P = ?$	$V = 12V$	$R = 4.0\Omega$	
			$P = \frac{V^2}{R} = \frac{(12)^2}{4.0} = \frac{144}{4.0} = 36 W$		
16	C				
17	C	$P = 1.0 \times 10^5 \text{ Pa} - 0.40 \times 10^5 \text{ Pa} = 0.6 \times 10^5 \text{ Pa}$		$F = ?$	
				$A = 2.0 \text{ m}^2$	
		$P = \frac{F}{A}$ $0.6 \times 10^5 = \frac{F}{2.0}$ $F = 1.2 \times 10^5 \text{ N}$			
18	B	Temperature Change in degrees Celsius = $70^\circ\text{C} - (-20^\circ\text{C}) = 90^\circ\text{C}$ $\therefore$ Temperature Change in Kelvin = $90\text{K}$			

19	E	Temperature: Constant $p_1 = 1.2 \times 10^5 \text{ Pa}$ $V_1 = 4.0 \times 10^{-5} \text{ m}^3$ $p_2 = ?$ $V_2 = 0.80 \times 10^{-5} \text{ m}^3$  $p_1 V_1 = p_2 V_2$  $1.2 \times 10^5 \times 4.0 \times 10^{-5} = p_2 \times 0.80 \times 10^{-5}$  $\frac{1.2 \times 10^5 \times 4.0 \times 10^{-5}}{0.80 \times 10^{-5}} = p_2$  $6.0 \times 10^5 \text{ Pa} = p_2$		
20	B	Statement I - Incorrect	Statement II - <b>Correct</b>	Statement III - Incorrect
		Refraction occurs when waves pass from one medium to another	Diffraction is greater in waves with a longer wavelength	Microwaves have a shorter wavelength than radio waves so microwaves diffract less than radio waves
21	A	<input checked="" type="checkbox"/> A Radiation R is X-rays and have a higher frequency than visible light <input checked="" type="checkbox"/> B Radiation R is X-rays as this radiation is between gamma and ultraviolet <input checked="" type="checkbox"/> C X-rays have a higher frequency than visible light <input checked="" type="checkbox"/> D Radiation R is X-rays as this radiation is between gamma and ultraviolet <input checked="" type="checkbox"/> E Radiation R is X-rays as this radiation is between gamma and ultraviolet		
22	C	$E = ?$ $\rho = 1.02 \times 10^3 \text{ kg m}^{-3}$ $g = 9.8 \text{ N kg}^{-1}$ $A = 3.5 \text{ m}$ $E = \frac{\rho g A^2}{2} = \frac{1.02 \times 10^3 \times 9.8 \times (3.5)^2}{2} = \frac{122451}{2} = 61226 \text{ J} = 6.1 \times 10^4 \text{ J}$		
23	A	$\dot{H} = 0.40 \text{ mSv h}^{-1}$ $H = ?$ $t = 30 \text{ minutes} = 0.5 \text{ h}$ $\dot{H} = \frac{H}{T}$ $0.40 = \frac{H}{0.5}$ $H = 0.40 \times 0.5 = 0.20 \text{ mSv}$		
24	B	$200 \text{ kBq} \rightarrow 100 \text{ kBq} \rightarrow 50 \text{ kBq} \rightarrow 25 \text{ kBq}$ 3 half-lives in 12 days $\therefore 1 \text{ half-life} = 4 \text{ days}$		
25	B	X	Y	Z
		<b>Fusion</b> Nuclear fusion reactions involve 2 smaller nuclei joining together to make a larger nucleus	<b>High</b> Fusion reactions only take place at very high temperatures	<b>Energy</b> Energy can be released when small nuclei join together in a fusion reaction

3b(i)	3.3 m	$E_p = 2400 \text{ J}$ $m = 75 \text{ kg}$ $g = 9.8 \text{ N kg}^{-1}$ $h = ?$ $E_p = m g h$ (1 mark) $2400 = 75 \times 9.8 \times h$ (1 mark) $h = 3.3 \text{ m}$ (1 mark)						
3b(ii)	One answer from:	Energy lost (as heat and sound) due to { friction air resistance						
3c(i)		A suitable curved path where the bike does not increase in height. <ul style="list-style-type: none"> <li>The bike will fall vertically faster the further it falls due to gravity</li> <li>The horizontal velocity will remain the same</li> </ul>						
3c(ii)	$3.9 \text{ m s}^{-1}$	$a = 9.8 \text{ m s}^{-2}$ $v = ?$ $u = 0 \text{ m s}^{-1}$ $t = 0.40 \text{ s}$ $a = \frac{v - u}{t}$ (1 mark) $9.8 = \frac{v - 0}{0.40}$ (1 mark) $9.8 \times 0.40 = v - 0$ $3.9 \text{ m s}^{-1} = v$ (1 mark)						
4a(i)	$2.28 \times 10^{11} \text{ m}$	$d = 1.5 \times 10^{11} \times 1.52$ $d = 2.28 \times 10^{11} \text{ m}$						
4a(ii)	760 s	$d = 2.28 \times 10^{11} \text{ m}$ $v = 3.0 \times 10^8 \text{ m s}^{-1}$ $t = ?$ $d = v \times t$ (1 mark) $2.28 \times 10^{11} = 3.0 \times 10^8 \times t$ (1 mark) $t = 760 \text{ s}$ (1 mark)

photodiode	phototransistor	thermistor	LDR									
thermocouple		thermopile	CCD									
11b	0.90 Hz	70% of infrared light received falls in the <b>medium</b> category 	Medium category gives 54 Wipes per minute <table border="1"> <tr> <td>Number of Raindrops</td> <td>No. of times wipers move back and forth per minute</td> </tr> <tr> <td>Low</td> <td>18</td> </tr> <tr> <td>Medium</td> <td>54</td> </tr> <tr> <td>High</td> <td>78</td> </tr> </table>	Number of Raindrops	No. of times wipers move back and forth per minute	Low	18	Medium	54	High	78	Calculation of frequency $N = 54$ (1mark) $f = \frac{N}{t}$ (1mark) $f = \frac{54}{60}$ (1mark) $f = 0.90 \text{ Hz}$
Number of Raindrops	No. of times wipers move back and forth per minute											
Low	18											
Medium	54											
High	78											
11c(i)A	<b>Normal</b> drawn as shown in diagram											
11c(i)B	<b>Angle of incidence</b> and <b>angle of refraction</b> drawn as shown in diagram											
11c(ii)	Answer to include:	<table border="1"> <tr> <td>1 mark</td> <td>Wavelength in water is greater than in glass</td> </tr> <tr> <td>1 mark</td> <td>Speed of light in water is greater than in glass</td> </tr> </table>		1 mark	Wavelength in water is greater than in glass	1 mark	Speed of light in water is greater than in glass					
1 mark	Wavelength in water is greater than in glass											
1 mark	Speed of light in water is greater than in glass											
12a	One answer from:	Fast electron	high-energy electron	An electron from the nucleus								
12b	Answer to include:	<table border="1"> <tr> <td>1 mark</td> <td>Activity of tritium source is less</td> <td>or</td> <td>Fewer beta particles emitted per second</td> </tr> <tr> <td>1 mark</td> <td colspan="3">Less light produced</td> </tr> </table>			1 mark	Activity of tritium source is less	or	Fewer beta particles emitted per second	1 mark	Less light produced		
1 mark	Activity of tritium source is less	or	Fewer beta particles emitted per second									
1 mark	Less light produced											

12c(i)	0.034 J	$D = 0.40 \text{ mGy} = 0.40 \times 10^{-3} \text{ Gy}$ $E = ?$ $m = 85 \text{ kg}$ $D = \frac{E}{m} \quad (1 \text{ mark})$ $0.40 \times 10^{-3} = \frac{E}{85} \quad (1 \text{ mark})$ $E = 0.034 \text{ J} \quad (1 \text{ mark})$				
12c(ii)	$4.0 \times 10^{-4} \text{ Sv}$	$H = ?$ $D = 0.40 \text{ mGy} = 0.40 \times 10^{-3} \text{ Gy}$ $w_r = 1$ $H = D \times W_r \quad (1 \text{ mark})$ $H = 0.40 \times 10^{-3} \times 1 \quad (1 \text{ mark})$ $H = 4.0 \times 10^{-4} \text{ Sv} \quad (1 \text{ mark})$				
13a(i)	One answer from:	<table border="1"> <tr> <td>The counter reading will include the source and background count</td> <td>Background will need to be subtracted</td> <td>To measure/determine the count rate due to the source</td> </tr> </table>	The counter reading will include the source and background count	Background will need to be subtracted	To measure/determine the count rate due to the source	
The counter reading will include the source and background count	Background will need to be subtracted	To measure/determine the count rate due to the source				
13a(ii)	Any suitable source					
13b(i)	Line graph showing:	<table border="1"> <tr> <td>Suitable scales, labels and units</td> <td>All points plotted Accurately to <math>\pm</math> half a division</td> <td>Best fit curve</td> </tr> </table>	Suitable scales, labels and units	All points plotted Accurately to $\pm$ half a division	Best fit curve	
Suitable scales, labels and units	All points plotted Accurately to $\pm$ half a division	Best fit curve				
13b(ii)	30 minutes	Take any halving on the <i>Corrected Count Rate</i> axis and extrapolate the time taken from these point on the <i>Time</i> axis				
13c(i)	Answer to include:	<table border="1"> <tr> <td>1 mark</td> <td>Reduce the distance between the detector and the source</td> </tr> <tr> <td>1 mark</td> <td>Alpha is absorbed by a few cm of air/range in air is a few cm. or Alpha has a shorter rang than Gamma</td> </tr> </table>	1 mark	Reduce the distance between the detector and the source	1 mark	Alpha is absorbed by a few cm of air/range in air is a few cm. or Alpha has a shorter rang than Gamma
1 mark	Reduce the distance between the detector and the source					
1 mark	Alpha is absorbed by a few cm of air/range in air is a few cm. or Alpha has a shorter rang than Gamma					
13c(ii)	7800	$A = 520 \text{ Bq}$ $N = ?$ $t = 15 \text{ s}$ $A = \frac{N}{t} \quad (1 \text{ mark})$ $520 = \frac{N}{15} \quad (1 \text{ mark})$ $N = 7800 \quad (1 \text{ mark})$
