# 2020 Marking Scheme

This marking scheme is for the intended National 5 Physics Exam in 2020 which was cancelled due to the Covid-19 pandemic. This paper was widely used in schools in 2021 to predict grades for students when the 2021 exams were cancelled. Some refer to this paper as the 2021 paper for this reason.

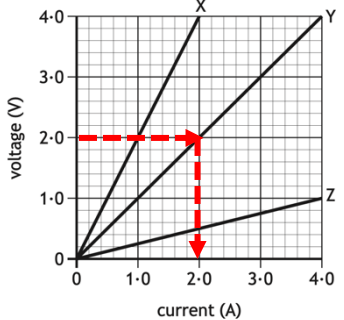

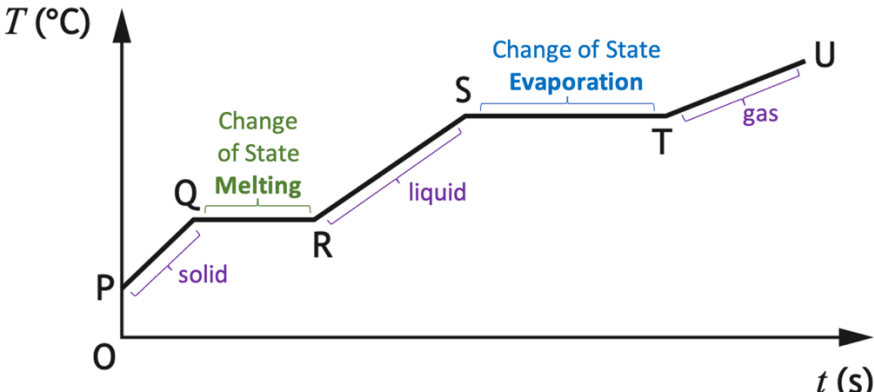

Whether this paper would have been the exact same paper presented to students had the exams gone ahead in 2020 is unknown but it fair to conclude that it would have been very close if not the same.

The grades awarded by SQA in 2020 and 2021 are in the table below.

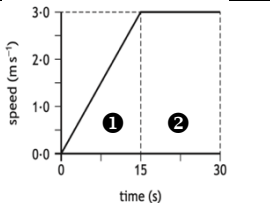

Grade Obtained	A	B	C	D	N/A
2020	40.3%	23.4%	22.2%	9.2%	4.8%
2021	43.4%	19.8%	18.1%	10.8%	7.8%

# 2020 Nat5 Physics Marking Scheme

Question	Answer	Physics Covered					
1	A	Vector Quantity	<b>force</b>	velocity	displacement	acceleration	weight
		Scalar Quantity	mass	speed	distance	time	energy
2	D	Terminal velocity is reached when the weight in the downward direction is balanced in the opposite direction by air resistance/friction					
3	B	$F_{un} = 25\text{ N} - 15\text{ N} = 10\text{ N}$		$m = 5.0\text{ kg}$	$a = ?$		
				$F = m \quad a$			
				$10 = 5.0 \times a$			
				$a = 2\text{ m s}^{-2}$			
4	B	$F = ?$		$k = 12\text{ N m}^{-1}$	$y = 0.110\text{m} - 0.080\text{m} = 0.030\text{ m}$		
				$F = k \quad y$			
				$F = 12 \times 0.030$			
				$F = 0.36\text{ N}$			
5	D	<input checked="" type="checkbox"/> A The vertical velocity increases as gravitational field strength causes acceleration <input checked="" type="checkbox"/> B The horizontal velocity is constant and appears horizontal on $v_h$ graph <input checked="" type="checkbox"/> C The horizontal velocity is constant and appears horizontal on $v_h$ graph <input checked="" type="checkbox"/> D Horizontal velocity is constant and vertical velocity is increasing. <input checked="" type="checkbox"/> E The horizontal velocity is constant and appears horizontal on $v_h$ graph					
6	C	At 540km altitude on graph, gravitational field strength = $8.3\text{ N kg}^{-1}$					
		$W = ?$		$m = 78\text{ kg}$	$g = 8.3\text{ N kg}^{-1}$		
		$W = mg = 78 \times 8.3 = 647\text{N} = 650\text{N}$					
7	C	<b>Statement I - Correct</b>	<b>Statement II - Correct</b>	<b>Statement III - Incorrect</b>			
		The orbital period of a geostationary satellite is 24 hours so satellite stays above the same location on Earth.	The orbital period of a geostationary satellite is 24 hours so satellite stays above the same location on Earth.	Geostationary satellites have a fixed altitude of 36000km so the satellite stays above same location on Earth			
8	B	$1\text{ light year} = 3.0 \times 10^8\text{ m s}^{-1} \times 1 \times 365.25 \times 24 \times 60 \times 60 = 9.5 \times 10^{15}\text{ m}$ $\text{No. of light years} = \frac{2.4 \times 10^{18}\text{ m}}{9.5 \times 10^{15}\text{ m}} = 2.5 \times 10^2\text{ light years}$					
9	C	Line spectrum from star					
		calcium			2 calcium lines missing from line spectrum of star		
		helium			3 helium lines missing from line spectrum of star		
		hydrogen			Both hydrogen lines in line spectrum of star		
		sodium			All sodium lines in line spectrum of star		
10	E	$P = 48\text{ W}$		$V = 12\text{ V}$	$I = ?$		
				$P = V \quad I$			
				$48 = 12 \times I$			
				$I = 4\text{ A}$			
		$Q = ?$		$I = 4\text{ A}$	$t = 5\text{ minutes} = 5 \times 60\text{ s}$		
				$Q = I \quad t$			
				$Q = 4 \times 5 \times 60$			
				$Q = 1200\text{ C}$			
11	D	Trace X	Trace Y		Trace Z		
		d.c. signal	a.c. signal		d.c. signal		
		<ul style="list-style-type: none"> <li>• negative charges (electrons) flow in one direction only.</li> <li>• gives a constant trace on oscilloscope</li> </ul>	<ul style="list-style-type: none"> <li>• the direction of electrons in current changes back and forth at regular intervals</li> <li>• the size of the current varies with time and is not constant</li> </ul>		<ul style="list-style-type: none"> <li>• negative charges (electrons) flow in one direction only.</li> <li>• gives a constant trace on oscilloscope</li> </ul>		

12	E	<p><b>Statement I - Correct</b></p> <p>Resistance is equal to the gradient of the line on an V-A graph.</p> <ul style="list-style-type: none"> <li>Resistor X gives steepest gradient on graph so Resistor X has greatest resistance.</li> </ul>	<p><b>Statement II - Correct</b></p> 	<p><b>Statement III - Correct</b></p> $\text{Gradient} = \frac{\Delta \text{voltage}}{\Delta \text{current}}$ $\text{Gradient} = \frac{1.0 - 0.0}{4.0 - 0.0}$ $\text{Gradient} = \frac{1.0}{4.0}$ $\text{Gradient} = \mathbf{0.25 \Omega}$				
13	A	<p><input checked="" type="checkbox"/>A This circuit will give readings of current and voltage to calculate <math>R = \frac{V}{I}</math></p> <p><input checked="" type="checkbox"/>B Voltmeter is incorrectly fitted to circuit (voltmeters are linked in parallel)</p> <p><input checked="" type="checkbox"/>C Ammeter is incorrectly fitted to circuit (ammeters are linked in series)</p> <p><input checked="" type="checkbox"/>D Ammeter is giving the current before it splits into either branch <math>\therefore</math> too big</p> <p><input checked="" type="checkbox"/>E Ammeter and voltmeter are incorrectly fitted to circuit</p>						
14	B							
15	B	$E = 9.0 \times 10^4 \text{ J} \qquad m = ? \qquad l = 22.6 \times 10^5 \text{ J kg}^{-1}$ $E = m \times l$ $9.0 \times 10^4 = m \times 22.6 \times 10^5$ $m = 0.04 \text{ kg}$						
16	D	$\text{Area} = l \times b = 0.2 \text{ m} \times 0.10 \text{ m} = 0.02 \text{ m}^2$ $P = ? \qquad F = 28 \text{ N} \qquad A = 0.02 \text{ m}^2$ $P = \frac{F}{A} = \frac{28}{0.02} = 1400 \text{ Pa}$						
17	E	<p><input checked="" type="checkbox"/>A As there is no increase in temperature the air particles do not move faster</p> <p><input checked="" type="checkbox"/>B Decrease in volume increases pressure leading to air particles hitting walls more often</p> <p><input checked="" type="checkbox"/>C As there is no decrease in temperature the air particles do not move slower</p> <p><input checked="" type="checkbox"/>D An increase in temperature for the particles to gain kinetic energy</p> <p><input checked="" type="checkbox"/>E Decrease in volume increases pressure leading to air particles hitting walls more often</p>						
18	A	<p>Temperature Change in degrees Celsius = <math>64^\circ\text{C} - 22^\circ\text{C} = 42^\circ\text{C}</math></p> <p><math>\therefore</math> Temperature Change in Kelvin = <math>42\text{K}</math></p>						
19	A	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Frequency of Waves</th> <th style="width: 50%;">Period of Waves</th> </tr> </thead> <tbody> <tr> <td>5 water waves in 10s: <math display="block">f = \frac{N}{t} = \frac{5}{10} = \mathbf{0.5 \text{ Hz}}</math></td> <td>Frequency = 0.5Hz <math display="block">T = \frac{1}{f} = \frac{1}{0.5} = \mathbf{2s}</math></td> </tr> </tbody> </table>			Frequency of Waves	Period of Waves	5 water waves in 10s: $f = \frac{N}{t} = \frac{5}{10} = \mathbf{0.5 \text{ Hz}}$	Frequency = 0.5Hz $T = \frac{1}{f} = \frac{1}{0.5} = \mathbf{2s}$
Frequency of Waves	Period of Waves							
5 water waves in 10s: $f = \frac{N}{t} = \frac{5}{10} = \mathbf{0.5 \text{ Hz}}$	Frequency = 0.5Hz $T = \frac{1}{f} = \frac{1}{0.5} = \mathbf{2s}$							
20	C	<p><input checked="" type="checkbox"/>A Speed decreases as red light enters a more dense. Medium (glass block)</p> <p><input checked="" type="checkbox"/>B Wavelength decreases as red light enters a more dense medium (glass block)</p> <p><input checked="" type="checkbox"/>C Both wavelength and speed of light decrease as it enters a more dense medium</p> <p><input checked="" type="checkbox"/>D Wavelength decreases as red light enters a more dense medium (glass block)</p> <p><input checked="" type="checkbox"/>E Wavelength decreases as red light enters a more dense medium (glass block)</p>						

21	C	<input checked="" type="checkbox"/> A red light bends towards normal when it enters a more dense medium (glass) <input checked="" type="checkbox"/> B red light bends towards normal when it enters a more dense medium (glass) <input checked="" type="checkbox"/> C red light has bent towards the normal as the glass block is a more dense medium <input checked="" type="checkbox"/> D The red light bends towards the normal but not touching the normal <input checked="" type="checkbox"/> E The beam appears to have reflected not refracted as it enters glass at the normal
22	D	<input checked="" type="checkbox"/> A X cannot be alpha as X bends towards + plate and alpha would deflect away <input checked="" type="checkbox"/> B X cannot be alpha as X bends towards + plate and alpha would deflect away <input checked="" type="checkbox"/> C Y cannot be alpha as Y would be attracted to – plate but X is undeflected <input checked="" type="checkbox"/> D X ( $\alpha$ ) bends towards – plate, Z ( $\beta$ ) bends towards + plate and Y ( $\gamma$ ) undeflected <input checked="" type="checkbox"/> E Y cannot be alpha as X would be attracted to the – plate but X is undeflected
23	A	<p style="text-align: right;">atoms <i>lose</i> electrons and become <i>positively</i> charged</p> <p style="text-align: center;">or</p> <p style="text-align: right;">atoms <i>gain</i> electrons and become <i>negatively</i> charged</p>
24	D	<p>The source releases alpha and gamma radiation but not beta.</p> <ul style="list-style-type: none"> <li>• piece of paper reduces the emitted radiation <math>\therefore</math> <b>alpha radiation present</b></li> <li>• 1cm of aluminium gives same result as piece of paper <math>\therefore</math> beta radiation not present</li> <li>• 5cm of lead reduces the emitted radiation <math>\therefore</math> <b>gamma radiation present</b></li> </ul>
25	A	<p><math>D = ?</math> <span style="float: right;"><math>E = 90 \mu\text{J} = 90 \times 10^{-6} \text{ J}</math> <span style="margin-left: 20px;"><math>m = 2.0 \text{ kg}</math></span></span></p> $D = \frac{E}{m} = \frac{90 \times 10^{-6}}{2} = 45 \times 10^{-6} \text{ Gy} = 45 \mu\text{Gy}$

Question	Answer	Physics Covered										
1a(i)	300s	$d = 870\text{m}$ <span style="float:right"><math>v = 2.9\text{ m s}^{-1}</math> <math>t = ?</math></span> $d = v \times t$ (1 mark) $870 = 2.9 \times t$ (1 mark) $t = 300\text{ s}$ (1 mark)										
1a(ii)	2.9 m s <sup>-1</sup> EAST or 2.9 m s <sup>-1</sup> 090	Average speed = 2.9 m s <sup>-1</sup> is a scalar quantity with no direction Average velocity = 2.9 m s <sup>-1</sup> is a vector quantity when the direction EAST or 090 is added										
1b(i)	0.20 m s <sup>-2</sup>	$a = ?$ <span style="float:right"><math>v = 3.0\text{ m s}^{-1}</math> <math>u = 0.0\text{ m s}^{-1}</math> <math>t = 15\text{ s}</math></span> $a = \frac{v - u}{t} = \frac{3.0 - 0.0}{15} = 0.20\text{ m s}^{-2}$ (1 mark) (1 mark) (1 mark)										
1b(ii)	68m	 <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Area ①</th> <th>Area ②</th> </tr> </thead> <tbody> <tr> <td>Distance = area under graph</td> <td>Distance = area under graph</td> </tr> <tr> <td><math>= \frac{1}{2} \times 15 \times 3.0</math></td> <td><math>= 15 \times 3.0</math></td> </tr> <tr> <td><math>= 22.5\text{m}</math></td> <td><math>= 45\text{m}</math></td> </tr> <tr> <td colspan="2"><b>Total Distance = 22.5 + 45 = 67.5m = 68m</b></td> </tr> </tbody> </table>	Area ①	Area ②	Distance = area under graph	Distance = area under graph	$= \frac{1}{2} \times 15 \times 3.0$	$= 15 \times 3.0$	$= 22.5\text{m}$	$= 45\text{m}$	<b>Total Distance = 22.5 + 45 = 67.5m = 68m</b>	
Area ①	Area ②											
Distance = area under graph	Distance = area under graph											
$= \frac{1}{2} \times 15 \times 3.0$	$= 15 \times 3.0$											
$= 22.5\text{m}$	$= 45\text{m}$											
<b>Total Distance = 22.5 + 45 = 67.5m = 68m</b>												
1c	048	$\tan \theta = \frac{\text{opp}}{\text{adj}} = \frac{2.6}{2.9} = 0.897 \therefore \theta = 42^\circ$ Bearing = $90^\circ - 42^\circ = 048$										
2a(i)	To reduce friction	The force of the moving air upwards lifts the vehicle up enough so that there is no friction between the linear air track and the vehicle.										
2a(ii)	Answer to include:	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td>1 mark</td> <td>length/width of card</td> </tr> <tr> <td>1 mark</td> <td>time for card to pass through the (light) gate</td> </tr> <tr> <td>1 mark</td> <td>time taken for card to reach (light) gate</td> </tr> </tbody> </table>	1 mark	length/width of card	1 mark	time for card to pass through the (light) gate	1 mark	time taken for card to reach (light) gate				
1 mark	length/width of card											
1 mark	time for card to pass through the (light) gate											
1 mark	time taken for card to reach (light) gate											
2b	Answer to include:	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td>1 mark</td> <td>1.8 m s<sup>-2</sup></td> </tr> <tr> <td>1 mark</td> <td>acceleration value is not in the same proportion to the accelerating force</td> </tr> </tbody> </table>	1 mark	1.8 m s <sup>-2</sup>	1 mark	acceleration value is not in the same proportion to the accelerating force						
1 mark	1.8 m s <sup>-2</sup>											
1 mark	acceleration value is not in the same proportion to the accelerating force											
2c	(gravitational) potential ↓ kinetic	Energy is stored as gravitational potential energy when it is higher up. When released the gravitational potential energy is converted into kinetic energy as it falls.										
3a	Working showing 0.45 Hz	$f = ?$ <span style="float:right"><math>N = 27</math> <math>t = 1\text{ minute} = 60\text{ s}</math></span> $f = \frac{N}{t} = \frac{27}{60} = 0.45\text{ Hz}$ (1 mark) (1 mark)										
3b(i)	1.1x10 <sup>5</sup> J	$P = 95\text{ W}$ <span style="float:right"><math>E = ?</math> <math>t = 1200\text{ s}</math></span> $P = \frac{E}{t} \therefore 95 = \frac{E}{1200} \therefore E = 95 \times 1200 = 1.1 \times 10^5\text{ J}$										
3b(ii)	One answer from:	Energy will also have been generated as { heat sound										
3c	160 N	$E_w = 208\text{ J}$ <span style="float:right"><math>F = ?</math> <math>d = 1.3\text{m}</math></span> $E_w = F \times d$ (1 mark) $208 = F \times 1.3$ (1 mark) $F = 160\text{ N}$ (1 mark)										
4a	Answer to include:	A natural satellite of a { planet dwarf planet										
4b	Hydra Longest orbital period	For a moon in a fixed orbit, the further the moon from the planet greater the orbital period. The mass and diameter of the moon are irrelevant.										
4c	Answer to include:	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td>1 mark</td> <td>It received a { gravitational boost slingshot catapult</td> <td>from Jupiter</td> </tr> <tr> <td>1 mark</td> <td colspan="2">causes an increase in its speed/kinetic energy</td> </tr> </tbody> </table>	1 mark	It received a { gravitational boost slingshot catapult	from Jupiter	1 mark	causes an increase in its speed/kinetic energy					
1 mark	It received a { gravitational boost slingshot catapult	from Jupiter										
1 mark	causes an increase in its speed/kinetic energy											

4d(i)	1.20x10 <sup>11</sup> J	$E_k = \frac{1}{2}mv^2 = \frac{1}{2} \times 454 \times (23.0 \times 10^3)^2 = 1.20 \times 10^{11} \text{ J}$ (1 mark) (1 mark) (1 mark)		
4d(ii)	Answer to include:	1 mark	There is no $\left\{ \begin{array}{l} \text{friction} \\ \text{air resistance} \\ \text{opposing force} \end{array} \right.$	
		1 mark	Therefore there is no unbalanced force	
4e	4.8x10 <sup>12</sup> m	$d = ?$ $v = 3.0 \times 10^8 \text{ m s}^{-1}$ $t = 4.4 \text{ hours} = 4.4 \times 60 \times 60 \text{ s}$ $d = v \times t$ (1 mark) $d = 3.0 \times 10^8 \times 4.4 \times 60 \times 60$ (1 mark) $d = 4.8 \times 10^{12} \text{ m}$ (1 mark)		
5	Answer to include:	1 mark	2 marks	3 marks
		Candidate has demonstrated a limited understanding of the physics involved. They make some statement(s) that are relevant to the situation, showing that they have understood at least a little of the physics within the problem.		Candidate has demonstrated a reasonable understanding of the physics involved. They make some statement(s) that are relevant to the situation, showing that they have understood the problem.
6a(i)	One answer from:	To $\left\{ \begin{array}{l} \text{reduce} \\ \text{limit} \end{array} \right.$ the current (in the LED)		
		Also accepted:		To protect/prevent damage to the LED
6a(ii)	330 Ω	$V_s = V_R + V_1 + V_2 + V_3$ $12 = V_R + 1.8 + 1.8 + 1.8$ (1 mark) $V_R = 6.6 \text{ V}$ $V_R = I \times R$ (1 mark) $I = 0.020 \text{ A}$ $R = ?$ $6.6 = 0.020 \times R$ (1 mark) $R = 330 \Omega$ (1 mark)		
6a(iii)	One answer from:	The green and blue LEDs have different $\left\{ \begin{array}{l} \text{voltages} \\ \text{currents} \end{array} \right.$ (than the red LEDs)		
6b	Answer to include:	1 mark	same brightness	
		1 mark	same voltage across the red LEDs <u>or</u> the three branches are connected in parallel, so voltage across them does not change	
7a	0.85 V (which is greater than switch on voltage 0.7 V)	$V_s = 5.0 \text{ V}$ $V_2 = ?$ $R_1 = 16.6 \text{ k}\Omega = 16600\Omega$ $R_2 = 3.4 \text{ k}\Omega = 3400\Omega$ $V_2 = \frac{R_2}{R_1 + R_2} \times V_s$ $V_2 = \frac{3400}{16600 + 3400} \times 5.0$ $V_2 = 0.85 \text{ V}$		
7b(i)	The control circuit operates at 5 V the floodlight at 230 V	The purpose of a relay switch is that the switch circuit has a much lower voltage than the circuit it is switching on. This reduces the risk of a serious electric shock when switching on the machine on remotely.		
7b(ii)	2.5 A	$P = 575 \text{ W}$ $I = ?$ $V = 230 \text{ V}$ $P = I \times V$ (1 mark) $575 = I \times 230$ (1 mark) $I = 2.5 \text{ A}$ (1 mark)		
7b(iii)	3A	Devices with a Power Rating of 720 W or below have a 3A fuse fitted. Devices with a Power Rating above 720 W have a 13A fuse fitted.		

8a	$4.6 \times 10^5 \text{ J}$	$E_h = ?$ $c = 810 \text{ J kg}^{-1} \text{ }^\circ\text{C}^{-1}$ $m = 2.5 \text{ kg}$ $\Delta T = 250^\circ\text{C} - 22^\circ\text{C} = 228^\circ\text{C}$ $E = c \times m \times \Delta T$ (1 mark) $E = 810 \times 2.5 \times 228$ (1 mark) $E = 4.6 \times 10^5 \text{ J}$ (1 mark)						
8b(i)	$58.0 \text{ } \Omega$	$\frac{1}{R_T} = \frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3}$ (1 mark) $\frac{1}{R_T} = \frac{1}{174} + \frac{1}{174} + \frac{1}{174}$ (1 mark) $\frac{1}{R_T} = \frac{3}{174}$ $R_T = 58.0 \text{ } \Omega$ (1 mark)						
8b(ii)	$910 \text{ W}$	$P = ?$ $V = 230 \text{ V}$ $R = 58.0 \text{ } \Omega$ $P = \frac{V^2}{R} = \frac{(230)^2}{58.0} = \frac{52900}{58.0} = 910 \text{ W}$ (1 mark) (1 mark) (1 mark)						
8c	Answer to include:	<table border="1"> <tr> <td>1 mark</td> <td>greater time</td> </tr> <tr> <td>1 mark</td> <td>specific heat capacity of oil is greater than clay brick</td> </tr> </table>	1 mark	greater time	1 mark	specific heat capacity of oil is greater than clay brick		
1 mark	greater time							
1 mark	specific heat capacity of oil is greater than clay brick							
9a	Working showing $2.0 \times 10^7 \text{ Pa}$	Temperature: Constant $p_1 = 2.5 \times 10^5 \text{ Pa}$ $p_2 = ? (2.0 \times 10^7 \text{ Pa})$ $V_1 = 960 \text{ litres}$ $V_2 = 12 \text{ litres}$ (1 mark) $p_1 V_1 = p_2 V_2$ $2.5 \times 10^5 \times 960 = p_2 \times 12$ (1 mark) $\frac{2.5 \times 10^5 \times 960}{12} = p_2$ $2.0 \times 10^7 \text{ Pa} = p_2$						
9b(i)	$280 \text{ K}$	Volume: Constant $p_1 = 2.0 \times 10^7 \text{ Pa}$ $p_2 = 1.9 \times 10^7 \text{ Pa}$ $T_1 = 21^\circ\text{C} = 294 \text{ K}$ $T_2 = ?$ (1 mark) $\frac{p_1}{T_1} = \frac{p_2}{T_2}$ (1 mark) $\frac{2.0 \times 10^7}{294} = \frac{1.9 \times 10^7}{T_2}$ $T_2 = \frac{1.9 \times 10^7 \times 294}{2.0 \times 10^7}$ (1 mark) $T_2 = 280 \text{ K}$						
9b(ii)	Answer to include:	<table border="1"> <tr> <td>1 mark</td> <td>(The decrease in temperature) decreases the kinetic energy of the gas particles/the particles move slower</td> </tr> <tr> <td>1 mark</td> <td>The particles hit the walls of the container less often/frequently</td> </tr> <tr> <td>1 mark</td> <td>The particles hit the walls of the container with less force</td> </tr> </table>	1 mark	(The decrease in temperature) decreases the kinetic energy of the gas particles/the particles move slower	1 mark	The particles hit the walls of the container less often/frequently	1 mark	The particles hit the walls of the container with less force
1 mark	(The decrease in temperature) decreases the kinetic energy of the gas particles/the particles move slower							
1 mark	The particles hit the walls of the container less often/frequently							
1 mark	The particles hit the walls of the container with less force							
10	Answer to include:	<table border="1"> <thead> <tr> <th>1 mark</th> <th>2 marks</th> <th>3 marks</th> </tr> </thead> <tbody> <tr> <td>Candidate has demonstrated a limited understanding of the physics involved. This type of response might include a statement of the principles involved, a relationship or an equation, and the application of these to respond to the problem. The answer does not need to be 'excellent' or 'complete' for the candidate to gain full marks.						

11a(i)	Amplitude labelled as shown in diagram			
11a(ii)	wavelength labelled as shown in diagram			
11b	1.4m	$v = 340 \text{ m s}^{-1}$ $f = 250\text{Hz}$ $\lambda = ?$ $v = f \times \lambda$ (1 mark) $340 = 250 \times \lambda$ (1 mark) $\lambda = 1.4 \text{ m}$ (1 mark)		
11c(i)	Graph showing:	1 mark Suitable scales, labels and units	1 mark All points plotted accurately to $\pm$ half a division	1 mark Best fit curve
11c(ii)	800 Hz	Must be consistent with the line the candidate has drawn. $\pm$ half a division tolerance	If the candidate has not shown a curve or line in (c)(i) this mark cannot be given.	If the candidate has used a non-linear scale in (c)(i) this mark cannot be given.
11c(iii)	Repeat measurement and average	Also accepted: Increase the range of lengths    Increase the number of different lengths.		
12a	Activity decreases too much with the time (to still be suitable)	With a half-life of 22 hours, at least 7 half-lives will have passed in the week after the solution was prepared. The solution would have less than 1% remaining. 100% $\rightarrow$ 50% $\rightarrow$ 25% $\rightarrow$ 12.5% $\rightarrow$ 6.25% $\rightarrow$ 3.13% $\rightarrow$ 1.56% $\rightarrow$ 0.78% Day 0    Day 1    Day 2    Day 3    Day 4    Day 5    Day 6    Day 7		
12b(i)	Any suitable source			
12b(ii)	330 decays	$A = 5.5 \text{ Bq}$ $N = ?$ $t = 1 \text{ minute} = 60\text{s}$ $A = \frac{N}{t}$ (1 mark) $5.5 = \frac{N}{60}$ (1 mark) $N = 330 \text{ decays}$ (1 mark)		
12b(iii)	One answer from:	Move the Geiger-Müller tube closer to the tissue sample    Place shielding around apparatus		
13a(i)	fission	Induced Nuclear Fission is the process where neutrons are absorbed by a nucleus causing it to split into two smaller nuclei and some more neutrons are sent out to split further nuclei in a chain reaction.		
13a(ii)	Answer to include:	1 mark Neutrons produced in 1 <sup>st</sup> reaction can go on to	cause further reactions split more nuclei	
		1 mark This process repeats	or a chain reaction occurs	
13b	96 years	$1 \rightarrow \frac{1}{2} \rightarrow \frac{1}{4} \rightarrow \frac{1}{8}$ 3 half-lives to decrease activity to $\frac{1}{8}$ of original value 1 half-life = 32 years $\therefore$ 3 half-lives = $3 \times 32 \text{ years} = 96 \text{ years}$		
13c(i)	$1 \times 10^{-5} \text{ Sv}$	Total Equivalent Dose = Equivalent Dose from Slow Neutrons + Equivalent Dose for Gamma Radiation = $D w_R$ + $D w_R$ = $(2.2 \times 10^{-6} \times 3)$ + $(3.4 \times 10^{-6} \times 1)$ = $6.6 \times 10^{-6} \text{ Sv}$ + $3.4 \times 10^{-6} \text{ Sv}$ = $1.0 \times 10^{-5} \text{ Sv}$		
13c(ii)	2000 Shifts	$N = \frac{20 \times 10^{-3}}{1.0 \times 10^{-5}}$ $N = 2000 \text{ Shifts}$
